Introduction

Rankings, Competition, and the Evolving American University

The apparently permanent, and often desperate, search for the lodestone of academic quality and prestige continues to produce the controversy that fuels the college and university ranking industry. Often inspired by the commercially successful *U.S. News & World Report* publication, newspapers and other publications have entered the competition to produce the most complete, comprehensive, accurate, or popular ranking methodology possible, depending on the publication's chief criticism of *U.S. News* and its own sales strategy. The industry is growing rapidly and has become highly globalized with rankings published for international universities by news organizations such as the [THES QS World University Rankings](#), published by *The Times Higher Education Supplement*, or the [Academic Ranking of World Universities](#), published by the *Institute of Higher Education at Shanghai Jiao Tong University*.

Much of the international activity, however, focuses on the relative ranking of universities and colleges within regions or countries, given the difficulty of compiling useful comparative information across the widely differentiated contexts of international higher education. For example, the *Maclean's Universities Ranking* focuses on an annual study of Canadian colleges and universities while the *Times of London's Good University Guide* ranks schools in the U.K.

However, recognizing that consumers of university services tend also to be interested in the relative prestige and rankings of the programs they attend, many organizations focus their surveys and rankings on particular programs, especially for business schools. For examples, see *Business Week's Best B-Schools 2006* and its list of the [Top 10 International MBA Programs](#); or the *Financial Times Global MBA Rankings 2007*, or the *Guardian's Guide to Universities*, *The Economist Intelligence Unit: Which MBA Online*.

Within the United States, the college and university ranking industry is remarkably robust, with a ranking system to match every preference, style, or institutional context. Some of these rankings speak to specific college-going student groups such as *Black Enterprise's Top Colleges for African Americans*, *Hispanic Magazine.com's Top 25 Colleges for Latinos*, or *New Mobility's Disability-Friendly Colleges*.¹

These examples from among the many surveys and rankings studies listed on the very useful University of Illinois at Urbana-Champaign Education and Social Science Library website on [College and University Rankings](http://www.library.uiuc.edu/edx/rankings.htm) [http://www.library.uiuc.edu/edx/rankings.htm] reflect the growing recognition that quality higher education is not only a major investment in personal opportunity for individual economic success, but a critical component of maintaining national economic competitiveness and the accompanying national prosperity. Whatever the various methodological characteristics of these surveys and rankings (and the quality and reliability vary dramatically), the number and diversity of efforts to identify the best of class among these institutions is remarkable.

The Dynamic Higher Education Marketplace

For those of us who work on measuring university performance, the attention paid to these issues is encouraging, although the confusion of rankings illustrates the difficulty we have in defining what we mean by “quality” or “effectiveness” or “value” when speaking of higher education institutions. Each of the rankings defines these terms in different ways, sometimes with reference to the goals of consumer groups, sometimes with reference to social or economic values believed to be common to the public at large. The review of these rankings demonstrates, among other things, that our terminology for describing the many providers of post-secondary education services and our classification system for describing the services themselves confuses more than it assists the understanding, let alone the ranking, of these providers. None of this should surprise us, as the post-secondary marketplace has experienced significant change over the past generation in the United States, as well as abroad, resulting in wide variation between the thousands of American institutions labeled colleges or universities.

These changes affect the mission, composition, and organization of the American higher education marketplace, and challenge consumers and regulators who attempt to assign common expectations of quality and performance across this large and complex industry. Even though most academics resist the definition of post-secondary education and especially higher education as an “industry,” the forces of commerce and competition have become the primary determinants of institutional success. Although for some this may appear a new development, the competitive context for higher education has been with us for over a century, if not longer.

¹ Other rankings identify institutions by philosophical approach such as the *Mother Jones Top 10 Activist Campuses*, the *John Templeton Foundation: Colleges That Encourage Character Development*, the *Young America's Foundation Top Ten Conservative Colleges*, or *A New Ranking of American Colleges on Laissez-Faire Principles, 1999-2000*. Still others present rankings based on the opinions of student constituencies such as *StudentsReview.com* and *Princeton Review's The Best Colleges Ranked by Students*.

The principal difference today is that the competition is national at least, not just local or regional. Public institutions within a state might previously have competed vigorously for a share of the state appropriation, while today they not only compete within the state, but also in the national marketplace for students, faculty, staff, and funding. Public and private institutions might once have competed primarily within their own sectors, but now public and private universities compete with each other in all markets. Complicating this competition, the traditional funding sources for public higher education have become highly vulnerable to competition from other state services – health care, corrections, K-12 education, retirement programs – as well as threatened by public opposition to revenue increases that reduce the opportunities for tax-based funding – and as such, taxpayer control. Yet even as some states have found it necessary to reduce the money provided to state higher education institutions, driving them towards other revenue sources such as tuition and fees, private and corporate funding, and the like, other states have begun to reinvest in higher education as a mechanism to drive local economic development. This shift to the economic development model tends to focus on research, technology development, occupationally-focused education and training, and participation in state programs to attract industry and business, rather than on the general support of undergraduate and graduate or professional education.

Economic pressure on higher education is significant, although not new by any means. Universities and colleges have always lived in a world of economic challenge; the “good old days” included major financial challenges accompanying the ups and downs of the national or local economies on which the institutions depended. Nonetheless, today’s marketplace for higher education has become both larger and more differentiated. This is a good thing, of course, in that it represents a growing commitment to provide post-secondary higher education opportunities to ever larger proportions of the American population. It also, however, presents a challenge because the needs of this large population of college-bound (or expected to be college-bound) individuals become more and more differentiated as the scale of the higher education industry becomes ever larger.

American colleges and universities in their traditional forms are rather archaic, based on a model of the small residential college with a relatively homogeneous population of students providing a standardized curriculum of study within a fixed time frame. Historically, this population was middle to upper class, studied the liberal arts and sciences, and graduated within four years. Although large universities, public or private, continue to pay homage to this concept, derived from the New England private

colleges and the Jeffersonian commitment to public higher education, their institutions offer a much more complicated and much less standardized set of services.

The highly selective private residential colleges remain viable examples of this model, even though most of them have found it essential to expand beyond the liberal arts core to provide business degrees, engineering programs, and other pre-professional or thinly disguised occupational majors. Outside of these highly selective and usually well endowed private institutions, however, the press for occupationally specific, highly diversified higher education has made most institutions collections of academically distinct programs held together by a loosely defined core curriculum, and in the more selective institutions, a residentially based experiential context for undergraduates. Within the traditional space of the name brand institutions, public and private, and those who imitate them, the key organizing concept is the notion of a college degree, a college experience, that is holistic in some not-too-carefully-defined manner and that carries a brand name that gives to the outside world some impression of consistent quality. The less focused and more differentiated the product of these institutions, the more important the brand name, and the more important the ranking as a marker of brand value.

Content and Context

The most significant challenge in this marketplace is the growing tendency to separate the content of higher education from its context. The content, of course, is the knowledge acquired by students as they pass through a course of study and earn a degree or other certificate of completion. The context includes the delivery mechanisms (teachers, classrooms, libraries, laboratories) and the setting (campuses, residence halls, student unions, sports programs, social organizations, student life, alumni associations). Two different forces are at work here. One push emphasizes the value of the context in preparing individuals for economic and social success. Attend the right college, this frame of reference implies, with the right context, containing the right faculty, and providing access to the right alumni, and the student is presumed to benefit substantially more than if they had attended an institution with a lesser quality context. The other push emphasizes the importance of the skills and knowledge acquired. This frame of reference seeks institutions that provide the student with the most knowledge, the highest possible level of skill in particular useful and occupationally important areas in the shortest amount of time, with the least investment in non-content related activities.

The context-focused institutions and the content-focused institutions coincide on the importance of learning, of knowledge acquisition, and on the preparation of students

for competitive success after graduation. Where they differ is in the approach to providing this result. Although we present these as two distinct models, in fact, most institutions present themselves in the marketplace with programs and options that permit students to construct educational programs that include as much context as they need, want, or can afford. However, the effort to tailor college and university programs to match the needs of many different students, and the competition among providers to capture as much of the marketplace as possible, has led to the increased fragmentation or decomposition of the traditional college and university product.

As the industry finds profit (or in the case of not-for-profit institutions, surplus) in offering highly differentiated programming to the market, many traditional institutions, especially in the public sector, find it more difficult to maintain the coherence and focus of institutional purpose. When institutions profitably sell some of their programs in online formats to constituencies completely external to the campus, the most financially successful online programs tend to be those with very high value to the consumer (business and other professionally oriented programs) or those of more general nature for which a large population (the military, for example) can be identified. Another profitable alternative is for institutions in the public sector to receive subsidies to provide online versions of their programs at low prices to populations geographically distant from any campus. The online education marketplace (both for- and not-for-profit) remains in a state of continuing and rapid evolution, but for this discussion our interest is in the impact on the traditional university.

When an institution sells a portion of its curriculum to off-campus constituencies it must design a different content delivery process from the on-campus process. The experience of online education clearly demonstrates that there is a high cost to the initial redesign of the delivery system to effectively provide online learning even if the content is identical to on-campus content. However, once designed and implemented, successive iterations within the delivery system and the expansion of its scale become much less expensive. This differs from the on-campus content delivery model in which small class size and student-instructor personal interaction are perceived to be significant elements signaling quality. This perception makes it difficult to gain economies of scale in on-campus settings, placing a practical limit on the size of campus-based institutions (and explaining to some extent the proliferation of economically inefficient relatively small institutions).

The online delivery system, in addition to separating the content from the context, also decouples the content delivery from specific and relatively permanent instructional

staff, assigning it instead to a system that can easily use qualified but contingent instructional staff. Moreover, the economic model of online education does not invest in a traditional professional faculty career for its instructional staff; it only invests in the ability of a contingent staff to deliver content within the online program. The online educational model recognizes that the brand name of an institutional sponsor is more important to the consumer than the name of the instructors offering the course. Brand-name faculty might design the content and validate the quality, but the actual instructional effort can be provided by an instructor with specialized skills for online education and in whom the online enterprise would have little permanent investment.

This shift from permanent investment in context to market-based investment in just-in-time educational delivery draws strength from the on-campus shift to greater reliance on contingent faculty. On the campus, one of the critical differentiating elements used to compete in the marketplace is the quality of the context within which education takes place. Student services, recreation facilities, intra-campus sports facilities, competitive intercollegiate sports, health programs, student activities and programs, and the like represent significant competitive features of college life. In addition, absent reliable indicators of quality content, institutions invested heavily in facilities to serve as symbols of the quality instruction that would take place inside. Well-equipped auditoria, elegant laboratories with the latest equipment, learning centers, academic support centers, large electronic databases for teaching and research purposes, and elaborate instructional technology all served to attract sufficient student populations to sustain the institutional programs. Yet, these things proved highly expensive, and ratcheted costs upward often beyond the ability of tuition and fee increases or state and national subsidies to support. Some institutions with strong public support in their legislatures and in states with dynamic economies (often in the Sunbelt) found it possible to invest in all the competitive amenities needed while at the same time maintaining reasonable net prices to students. But, many institutions found the price-cost squeeze too great and sought ways to reduce some of their permanent costs.

Deconstructing Faculty Work – Subsidizing Research

One cost reduction method involved deconstructing faculty work into its various components. Much faculty work is associated with teaching undergraduate students to fulfill the needs of the curriculum. However, the permanent faculty also has many other functions including administrative (recruiting and hiring faculty, reviewing curricula, managing departmental affairs, serving on university committees), student advising (in some institutions the faculty

provide advising support), and research and creative activity. Because the permanent faculty represent a continuing capital-like cost (the investment in a tenured faculty member is a 25-year commitment to a relatively non-liquid asset) that limits the institution's flexibility to reassign people to new programs to meet market demands, many universities began hiring more contingent faculty and reduced the number of permanent faculty. This shift is well along, although it is much more visible in the less selective institutions and less prevalent in the highly selective institutions.

Contingent faculty represent a flexible professional work force. Hired part-time or full-time as needed, on a one-semester, one-year, or five-year basis; hired for one course or a full course load to meet the needs of the institution at any particular time, the contingent faculty can grow, decline, or change specialty as required. For a given unit of instruction, contingent faculty are almost always less expensive as well.

When we decouple the instructional function from the permanent faculty we also highlight the specialization of the research function. If we can buy teaching talent on a piecework, contingent basis, we can also buy research talent separately and on a contingent basis. In many ways, research universities have understood this for years, even when hiring faculty on a full-time tenured basis. For a research university, a faculty member's teaching abilities represent in most cases a stable and reliable resource. Good teachers tend to remain good teachers for their entire careers. However, a faculty member's research abilities reflect a much more fragile and unpredictable resource. Research talent is relatively rare compared to teaching talent, and outstanding researchers may not be able to sustain their early productivity throughout their careers. Large research universities buffer this risk by expecting tenured faculty to teach and perform research and creative activity throughout their careers, recognizing that when a faculty member is highly research productive their teaching contribution will be less but if their research productivity declines, their teaching contribution can increase.

However, the large scale of scientific research and the exceptional cost of facilities have led to the growth of a large number of contingent research faculty (again in response to the institution's concerns about the risk associated with the inflexibility of permanent faculty employees). Contingent faculty in research can be labeled post-docs or research faculty, but what they share is identification with specific research projects and a dependence on the funding associated with those projects. When the funding disappears, the university has no long-term obligation to contingent research faculty.

As is always the case in American higher education, these trends express themselves in remarkably different ways depending on an institution's profile, the market niche it occupies, the character of its financial structure, and its history. Nonetheless, as the higher education marketplace continues its rush into ever more intense competition, we can expect to see continued fragmentation as institutions focus their attention where their comparative advantage is greatest. We will see even more specialized institutions emerge; we will see continued resistance to regulatory efforts that attempt to standardize or homogenize the content or outcomes of the industry (because such regulation limits the ability to specialize). The current attention to branding will increase as a substitute for clearly understood differences among the many products delivered by a single institution or as the result of an effort to spread brand value derived from one institution across the products of all institutions within systems. By having a strong brand, an institution can sell many distinct products (some of lower quality and some of higher quality) all under the same name. All consumer product and service industries use their brands in this fashion – and higher education is not far behind.

Measuring the Results of Investment

In The Center for Measuring University Performance, our focus on the Top American Research Universities shows that the fundamental requirement for research university success is money. University research is a product sold below cost to its primary consumers. Successful research universities find alternative, secondary consumers of research success who will pay the difference between the cost of research and the compensation provided by direct research sponsors in exchange for a wide range of benefits. Some investment comes from public sources, often state and sometimes local governments that pay in hopes of a general return to their economy of greater employment, a larger tax base, and other social benefits. Some funding comes from foundations who seek philanthropic returns on investments through improvements in health care, the environment, or other social, cultural, and economic opportunities. Research funding also comes through private giving to endowment or direct gifts, providing the donor the benefit of philanthropic achievement and often the vicarious or even direct participation in the creation of knowledge. Indirect research support also comes through subsidies from the undergraduate program to graduate and research activities of an institution in return for more complex undergraduate programs and the association of the undergraduate degree with the highly visible prestige of internationally preeminent research or creative faculty. Corporate funding seeks a direct commercial benefit from the research work of the university, often subsidized by

other sources. And finally, the federal government provides large amounts of funding for research products that serve national goals, but almost never pays close to the full cost of the research it sponsors.

As a consequence of this process, American research universities continue to focus tremendous effort on the challenge of finding sufficient funding to subsidize research productivity. The value of university research to the nation is exceptional by every measure or study ever done. But this university research enterprise is extraordinarily competitive because the supply of talent capable of contributing to the research agenda is limited and the funding required to support this limited talent is inadequate. Consequently, universities that can find the money to purchase talent and support will have the best chance in the competition. Money is a fundamental requirement, but it is not sufficient to guarantee high levels of research performance. In addition, research universities have to be focused, efficient and performance based. The better the university manages its research productivity by measuring its competitive success, the more research performance it will get from whatever funds it acquires to invest in research.

Campuses, Systems, and Medical Schools

The Top American Research Universities methodology for categorizing institutions continues the practice of focusing on campus-based research institutions. As the higher education marketplace becomes more and more complex, the value of clearly defined performance criteria will increase. This publication seeks to identify the elements that contribute to and help define exceptional research performance by single institutions. We know that many multiple campus systems seek to collect the performance of their institutions under one brand name to enhance the value of that brand. This may well be an effective positioning strategy within the competitive context. However, the goal of this publication is not to evaluate the aggregate characteristics of brands but to collect reasonably consistent data about the performance of individual research-oriented institutions. Consequently, we report data by institution, which sometimes requires an estimate when the institution's productivity is only reported as part of a system aggregate.

Even with this effort, we recognize some significant issues still remain. The most important of these is the impact of research-oriented medical schools. If a campus-based medical school is highly research intensive, it can represent a substantial portion of a campus' research productivity and contribute significantly to other characteristics we measure (such as post-docs or faculty awards, for example). When we compare the research productivity of a campus with a research intensive medical school to a campus without such a unit, the result is not always as useful as we would like. For that reason, beginning with the 2006 report, we have begun including a table that displays the research productivity of institutions with and without the component represented by the medical school. This does not form a part of our general report and the associated classifications, but it does provide additional information for understanding the differences in research productivity among these campus-based institutions.

As always in these reports, we acknowledge the strong support we have received from our colleagues on the Advisory Board, from the various institutions and colleagues who have provided us with comments and suggestions for improvement, and from our home institutions. As regular observers of these reports know, this project owes much to the generosity of Mr. Lewis M. Schott, whose enthusiasm and commitment continue to inspire our work. We thank the University of Florida Foundation for its continued commitment to this project. Our generous hosts at Arizona State University have made the transition to ASU graceful and effective. All of our faculty and staff colleagues at Arizona State University, the University of Massachusetts Amherst, the SUNY system, and the Louisiana State University System have been generous in their advice and support. The quality of the data included here is the result of the expert work of Craig W. Abbey, who serves as the Research Director of The Center for Measuring University Performance. We also thank Carol Chapman for her management of The Center's activities as Administrative Specialist at ASU and Emily Dalton Smith at ASU for her editorial expertise.

John V. Lombardi, Co-Director

Elizabeth D. Capaldi, Co-Director

Part I – The Top American Research Universities

The Center for Measuring University Performance determines the Top American Research Universities by their rank on nine different measures: Total Research, Federal Research, Endowment Assets, Annual Giving, National Academy Members, Faculty Awards, Doctorates Granted, Postdoctoral Appointees, and SAT/ACT range. (The Source Notes section of this study provides detailed information on each of the nine indicators.) The tables group research institutions according to how many times they rank in the top 25 on each of these nine measures. The top category includes those universities that rank in the top 25 on all nine indicators. The bottom category includes universities with only one of the nine measures ranked in the top 25. Within these groups, institutions are then sorted by how many times they rank between 26 and 50 on the nine performance variables, with ties listed alphabetically. A similar methodology produces a second set of institutions—those ranked 26 through 50 on the same nine measures.

For the purpose of this study, *The Center for Measuring University Performance* includes only those institutions that had at least \$20 million in federal research expenditures in fiscal year 2005. This is the same dollar cutoff used in our last six reports. There were 196 institutions who met our criteria for fiscal year 2005, 57 private and 136 public.

The first two tables list each institution with the most current data available for each measure and its corresponding national rank (i.e., rank among all institutions regardless of whether they are privately or publicly controlled). The third and fourth tables provide the same nine data measures but with the groupings determined by the control rank (i.e., rank among all private or all public institutions). Institutions ranking in the top 25 on at least one measure are included in the tables with the (1-25) identifier, while those ranking 26 through 50 are found in the tables labeled with the (26-50) header.

The Top American Research Universities (1-25) identifies the 51 institutions (26 private, 25 public) that rank in the top 25 nationally on at least one of the nine measures.

The Top American Research Universities (26-50) identifies the 37 institutions (10 private, 28 public) that rank 26 through 50 nationally on at least one of the nine measures.

The Top Private Research Universities (1-25) identifies the 34 private institutions that rank in the top 25 among all private universities on at least one of the nine measures.

The Top Public Research Universities (1-25) identifies the 48 public institutions that rank in the top 25 among all public universities on at least one of the nine measures.

The Top Private and Public Research Universities (26-50) identifies the 21 private and 42 public institutions that rank 26 through 50 among their private or public counterparts on at least one of the nine measures.

Many research universities rank highly both nationally and among their public or private peers, and therefore appear in more than one table. For example, of the 34 private institutions in the Top Private Research Universities (1-25) table, 26 universities also appear in the Top American Research Universities (1-25) table.

Data found in these tables may not always match the figures published by the original source. *The Center for Measuring University Performance* makes adjustments, when necessary, to ensure that the data reflect the activity at a single campus rather than that of a multiple-campus institution or state university system. When data are missing from the original source, *The Center for Measuring University Performance* may substitute another figure, if available. A full discussion of this subject, and the various adjustments or substitutions made to the original data, is in the Data Notes section of this report.

The Center for Measuring University Performance presents these tables, along with prior years' top universities, in Microsoft Excel spreadsheets on its web site [<http://mup.asu.edu>].

Part II – The Center for Measuring University Performance – *Research Universities*

The Center for Measuring University Performance's research universities consist of academic institutions that had more than \$20 million in federal research expenditures in fiscal year 2005. In the following tables, institutions are listed alphabetically with the most current data available on each measure and their rank on each measure for each year. *The Center for Measuring University Performance* provides both the national rank (rank among all universities) and the control rank (rank within private or public universities). We include five years of data for each measure, which correspond to the same data years used in each of the five prior The Top American Research Universities reports. In addition to the nine performance variables presented in Part I tables, these tables also include other institutional characteristics related to student enrollment, medical schools, land grant status, ownership, research focus, and National Merit and National Achievement Scholars. The Source Notes section of this report provides detailed information on each data element. Tables in this section include the following:

Total Research Expenditures (2001-2005)

Federal Research Expenditures (2001-2005)

Research by Major Discipline (2005)

Endowment Assets (2002-2006)

Annual Giving (2002-2006)

National Academy Membership (2002-2006)

Faculty Awards (2002-2006)

Doctorates Awarded (2002-2006)

Postdoctoral Appointees (2001-2005)

SAT Scores (2001-2005) Source: The Annual Survey of Colleges of the College Board and Data Base, 2006-2007. Copyright © 2006 College Entrance Examination Board. All rights reserved.

National Merit and Achievement Scholars (2002-2006)

Change: Research presents trend data on total, federal, and non-federal research (1996 and 2005) in constant dollars.

Change: Private Support and Doctorates provides trend data on endowment assets (1997 and 2006) and annual giving (1997 and 2006) in constant dollars, and doctorates awarded (1997 and 2006).

Change: Students includes trend data on SAT/ACT ranges (1997 and 2005), National Merit and Achievement Scholars (2001 and 2006), and student headcount enrollment (1996 and 2005).

Institutional Characteristics includes state location, highest degree offered, medical school and land grant status, federal research focus (summary of federal research by discipline), and total student enrollment.

Student Characteristics provides headcount enrollment data broken out by level (i.e., undergraduate, graduate, first-professional), part-time enrollment by level, and degrees awarded.

The Center for Measuring University Performance Measures presents the number of times a university ranks in the top 25 (or 26-50) on the nine quality measures in this year's report as compared to the past six years (2002-2007 reports).

Data found in these tables may not always match the figures published by the original source. *The Center for Measuring University Performance* makes adjustments, when necessary, to ensure that the data reflect the activity at a single campus rather than that of a multiple-campus institution or state university system. When data are missing from the original source, *The Center for Measuring University Performance* may substitute another figure, if available. A full discussion of this subject, and the various adjustments or substitutions made to the original data, is in the Data Notes section of this report.

The prior years' data or ranks may differ slightly from our last report due to revised figures or estimates from the data source or institution.

The Center for Measuring University Performance's web site [<http://mup.asu.edu>] provides these same tables in Microsoft Excel spreadsheets for ease of analysis. In addition to the over-\$20-million group, the on-line tables contain data on all institutions reporting any federal research since 1990.

Part III – The Top 200 Institutions

The following tables list the top 200 universities and colleges on each of the nine performance measures, along with National Merit and Achievement Scholars. (The Source Notes section provides detailed information on each of the 10 data elements.) Unlike the previous tables in Parts I and II, this section includes data for all academic institutions regardless of their federal research activity level.

The Center for Measuring University Performance provides each institution's rank nationally among all universities as well as its rank by institutional control (i.e., rank among private or public peers). In cases where several institutions tie for last place, we use a different cutoff point. For National Academy members, we list all institutions with at least one National Academy member among their faculty (a total of 187 institutions). Tables in this section include:

2005 Total Research Expenditures

2005 Federal Research Expenditures

2006 Endowment Assets

2006 Annual Giving

2006 National Academy Membership

2006 Faculty Awards

2006 Doctorates Granted

2005 Postdoctoral Appointees

2005 SAT Scores (Source: the Annual Survey of Colleges of the College Board and Data Base, 2006-2007. Copyright © 2006 College Entrance Examination Board. All rights reserved.)

2006 National Merit and Achievement Scholars

Data found in these tables may not always match the figures published by the original source. *The Center for Measuring University Performance* makes adjustments, when necessary, to ensure that the data reflect the activity at a single campus rather than that of a multiple-campus institution or state university system. When data are missing from the original source, *The Center for Measuring University Performance* may substitute another figure if available. A full discussion of this subject, and the various adjustments or substitutions made to the original data, is in the Data Notes section of this report.

The Center for Measuring University Performance presents these tables, along with the prior years' top 200, as Microsoft Excel spreadsheets on-line at [<http://mup.asu.edu>].

The Top 200 Institutions – Total Research Expenditures (2005)

Source Notes

The Center Measures

Total Research Expenditures

Federal Research Expenditures

Source: NSF/SRS Survey of R&D Expenditures at Universities and Colleges, FY 2005.

Each year, the National Science Foundation (NSF) collects data from hundreds of academic institutions on expenditures for research and development in science and engineering fields and classifies them by source of funds (e.g., federal government, state and local government, industry, etc.). These data are the primary source of information on academic research and development (R&D) expenditures in the United States. Included in this survey are all activities specifically organized to produce research outcomes that are separately budgeted and accounted for. This “organized research” may be funded by an external agency or organization (“sponsored research”) or by a separately budgeted organizational unit within the institution (“university research”). This report excludes activities sponsored by external agencies that involve instruction, training (except training in research techniques, which is considered organized research), and health service, community service or extension service projects.

All Federally Funded Research Labs (FFRLs) are excluded from these academic expenditures data, including the following: Jet Propulsion Laboratory (California Institute of Technology); Los Alamos National Lab, Lawrence Livermore Lab, Lawrence Berkeley Lab (University of California); Software Engineering Institute (Carnegie Mellon); Argonne National Laboratory (University of Chicago); National Astronomy and Ionospheric Center (Cornell); Ames Laboratory (Iowa State University); Lincoln Laboratory (MIT); Plasma Physics Lab (Princeton); and Linear Accelerator Center (Stanford). The NSF data no longer classify the Applied Physics Lab (APL) at Johns Hopkins as an FFRL, but federal funds support the vast majority of research conducted there. The APL makes up nearly one-half of Johns Hopkins’ total R&D expenditures and 53 percent of its federal R&D expenditures.

While inconsistencies in reporting (known and unknown) do exist here, as in any survey of this type, problems arise mostly when one breaks out the data by source of funds. NSF expects institutions to use year-end accounting records to complete this report, and there are nationally recognized accounting guidelines for higher education institutions. However, there are also countless variations in institutional policy that determine whether the university reports a particular expenditure as coming from one source or another, or possibly not counted at all. Take federal formula funds for agriculture (e.g., Hatch-McIntire, Smith-Lever) as an example. We conducted an informal survey of the appropriate institutions in the Association of American Universities (AAU) and found that two out of eleven land grants did not include any of these federal funds in their 1997 NSF data, while others

included all or some of these monies. Because these funds make up a very small percentage of the total research expenditures in any given year, the impact on our total research rankings is slight. The agriculture formula funds will have a somewhat greater, but still small, impact on the federal research rankings. NSF notes, “An increasing number of institutions have linkages with industry and foundations via subcontracts, thus complicating the identification of funding source. In addition, institutional policy may determine whether unrestricted state support is reported as state or as institutional funds.”¹

We believe that the reporting inconsistencies in the data are relatively minor when using the total research expenditures and the federal research expenditures component. Federal and state government audits of institutional accounting make deceptive practices highly unlikely, even though these entities do not audit the NSF data directly. NSF goes to great lengths to verify the accuracy of the data, especially federal expenditure data—checking them against several other federal agencies that collect the same or similar information. In fact, all major federal agencies and their subdivisions submit data to NSF identifying research obligations to universities each year. Historically, the NSF data have tracked very closely the data reported by universities.² Further, for their National Patterns of R&D Resources series, NSF prefers to use the figures reported by the performers of the work (that is, academic institutions, industry, nonprofits) because they believe that the performers are in the best position to accurately report these expenditures.

In some sections of this report, these expenditure data are deflated to constant 1983 dollars to show real change over time. While NSF uses the Gross Domestic Price (GDP) implicit price deflator in its reports on federal trends in research, we use the Higher Education Price Index (HEPI) because of its narrower focus. Developed by Research Associates of Washington, the HEPI illustrates the effect of inflation on college and university operations.³ In contrast, the GDP implicit price deflator is based on change in the entire U.S. economy and, as noted by NSF itself, “[its] use more accurately reflects an ‘opportunity cost’ criterion [i.e., the value of R&D in terms of the amount of other goods and services that could have been spent with the same amount of money], rather than a measure of cost changes of doing research.”⁴

The research trend data always reflect the most recent published data available because NSF allows institutions to submit revised figures for up to two years. Each year, NSF reports data for the current year as well as for the previous seven years. Specifically, we use the 2005 Survey data for fiscal years (FYs) 2004-05, the 2004 Survey for FYs 1997-2003 data, and the 2003 Survey for FY 1996 data. NSF’s published nationwide totals for academic R&D expenditures will not always match the corresponding totals in this study due to NSF’s sampling procedures for smaller or non-reporting institutions. In some years, rather than

identifying the institutions individually, NSF provides one aggregate figure for all sampled institutions.

Endowment Assets

Source: NACUBO Endowment Study as reported in the Chronicle of Higher Education, endowment market value as of June 30, 2006.

Institutions report the market value of their endowment assets as of June 30 to three different sources, and they quite often use three different values. For this project, we use the National Association of College and University Business Officers (NACUBO) Endowment Study because of NACUBO's long history of reporting endowments of higher education institutions, their emphasis on using audited financial statements, and their focus on net assets (i.e., includes returns on investments and excludes investment fees and other withdrawals). NACUBO conducts its study annually and reports the results each February in the Chronicle of Higher Education.

Another source for endowment assets is the Council for Aid to Education's (CAE) annual Voluntary Support of Education (VSE) survey, cosponsored by the Council for Advancement and Support of Education (CASE) and the National Association of Independent Schools. The VSE survey is useful as a secondary resource because it provides more single-campus data than the other two sources. For those institutions that report a system-wide total to NACUBO, we often use the VSE data to calculate a campus' percentage contribution to the entire system, applying that factor to the NACUBO figure. In other cases, we may substitute the VSE figure when the institution indicates that this is a good data source.

The National Center for Education Statistics (NCES) Integrated Postsecondary Education Data System (IPEDS) Finance Survey also collects information on endowment assets, but these figures are often much lower than the two other sources and also are available much later. Although IPEDS instructions say to report endowment assets for "the institution and any of its foundations or affiliated organizations," it appears that not all institutions do so.

The fact that the NACUBO study requests net assets, while IPEDS and the VSE survey request gross assets, cannot explain the large differences found in some cases. In calling various institutions, we found it very difficult to determine exactly why the numbers vary so greatly. Oftentimes, two or more individuals at an institution independently report figures for these three reports with no clear understanding of how or why the numbers differ. An examination of the 1997 endowment figures provided by these institutions showed only one university (University of North Carolina at Chapel Hill) that submitted the same figure to each of the three organizations. We discovered no consistent pattern to explain reporting variations among the institutions. This area definitely warrants more study.

Annual Giving

Source: Council for Aid to Education's Voluntary Support of Education (VSE) Survey, FY 2006.

The Council for Aid to Education (CAE), an independent subsidiary of RAND, has produced the Voluntary Support of Education (VSE) Survey since 1986. The annual giving data include all contributions actually received during the institution's fiscal year in the form of cash, securities, company products, and other property from alumni, non-alumni individuals, corporations, foundations, religious organizations, and other groups. Not included in the totals are public funds, earnings on investments held by the institution, and unfulfilled pledges.

CAE's VSE Data Miner service, available on-line, provides 10 years of data for all participating institutions (more than 1,600 universities and colleges). Although this is a subscription-based service and requires a user ID and password, limited access is available on-line at [<http://www.cae.org/vse>].

National Academy Members

Source: National Academy of Sciences, National Academy of Engineering, and Institute of Medicine membership directories for 2006.

One of the highest honors that academic faculty can receive is membership in the National Academy of Sciences (NAS), the National Academy of Engineering (NAE), or the Institute of Medicine (IOM). All three are private, nonprofit organizations and serve as advisors to the federal government on science, technology, and medicine. Nominated and voted on by active members, newly elected members of these organizations receive life terms. Individuals elected to membership come from all sectors—academia, industry, government, and not-for-profit agencies or organizations. Member election dates are in February (NAE), April (NAS), and October (IOM).

The data collected for these rankings use active or emeritus members at their affiliated work institution, as reported in the on-line membership directories. In all cases, we were able to determine the specific campus for individual members. We re-check institutional affiliation annually to account for established members who have changed employers or whose membership is no longer active.

Faculty Awards in the Arts, Humanities, Science, Engineering, and Health

Source: Directories or web-based listings for multiple agencies or organizations.

For this category, we collect data from several prominent grant and fellowship programs in the arts, humanities, science, engineering, and health fields. Included in this measure are:

- American Council of Learned Societies (ACLS) Fellows, 2005-06

- Beckman Young Investigators, 2006
- Burroughs Wellcome Fund Career Awards, 2006
- Cottrell Scholars, 2006
- Fulbright American Scholars, 2006-07
- Getty Scholars in Residence, 2006-07
- Guggenheim Fellows, 2006
- Howard Hughes Medical Institute Investigators, 2006
- Lasker Medical Research Awards, 2006
- MacArthur Foundation Fellows, 2006
- Andrew W. Mellon Foundation Distinguished Achievement Awards, 2006
- National Endowment for the Humanities (NEH) Fellows, 2007
- National Humanities Center Fellows, 2006-07
- National Institutes of Health (NIH) MERIT (R37) FY 2006
- National Medal of Science and National Medal of Technology, 2005
- NSF CAREER awards (excluding those who are also PECASE winners), 2006
- Newberry Library Long-term Fellows, 2006-07

While the vast majority of these programs clearly identify a particular campus, in a few instances we used the institution's web-based phone directory to determine the correct campus.

Doctorates Awarded

Source: NCES IPEDS Completions Survey, doctoral degrees awarded between July 1, 2005, and June 30, 2006.

Each year, universities report their degrees awarded to the NCES in the IPEDS Completions Survey. IPEDS provides straightforward instructions for reporting doctoral degrees awarded, and we do not find any inconsistencies in reporting among the universities included in our rankings. IPEDS asks

each institution to identify the number of Doctor of Education, Doctor of Juridical Science, Doctor of Public Health, and Doctor of Philosophy degrees awarded between July 1 and June 30.

Most institutions in our study submit degree data by campus or offer doctoral degrees solely or primarily at the main campus.

In addition to doctorate degrees, TheCenter presents degrees awarded at other levels—associate's, bachelor's, master's, and professional degrees—in the Student Characteristics table.

Postdoctoral Appointees

Source: NSF/Division of Science Resource Statistics (SRS) Survey of Graduate Students and Postdoctorates in Science and Engineering, Fall 2005.

Each year, NSF and NIH collect data from all institutions offering graduate programs in any science, engineering, or health field. The Survey of Graduate Students and Postdoctorates in Science and Engineering (also called the Graduate Student Survey or GSS) reflects graduate enrollment and postdoctoral employment at the beginning of the academic year. Postdoctorates are defined in the GSS as "individuals with science and engineering PhD's, MD's, DDS's or DVM's and foreign degrees equivalent to U.S. doctorates who devote their primary effort to their own research training through research activities or study in the department under temporary appointments carrying no academic rank." The definition excludes clinical fellows and those in medical residency training programs unless the primary purpose of their appointment is for research training under a senior mentor.

In the methodological notes for this survey,⁵ NSF indicates that it verifies the data with the institutional coordinator when dramatic year-to-year fluctuations are noted. In addition, in this data set, it is unclear whether an institution has actually reported zero postdocs or NSF has simply assigned a zero for non-response (rather than imputing by using prior-year or peer data, as described in NSF methodological notes). This year, in cases where we suspect it is not a true zero, we left the field blank.

Although each doctorate-granting campus submits data separately, NSF often aggregates them in its published reports. In all cases, we obtain the single-campus data for these schools directly from NSF.

SAT Scores

Source: the Annual Survey of Colleges of the College Board and Data Base, 2006-2007. Copyright © 2005 College Entrance Examination Board. All rights reserved.

The College Board reports the 25th and 75th percentiles for verbal and quantitative SAT I scores for most institutions in our study. The institutions submit these data to The College Board each spring through its Annual Survey of Colleges. For our measure, we calculated the median of that range. Some institutions

report the ACT instead of the SAT to The College Board. In those cases, we use a conversion table provided by The College Board to generate a comparable SAT equivalent score.⁶ When an institution submits neither an SAT nor ACT score, we substitute data from IPEDS or other national data sources.

Other Measures of Undergraduate Quality

National Merit and Achievement Scholars

Source: The 2005-06 National Merit Scholarship Corporation Annual Report, which reflects the 2005 freshman class.

The National Merit Scholarship Corporation (NMSC) is an independent, nonprofit organization that awards scholarships to the nation's outstanding high school seniors based on their academic achievement, qualifying test scores, high school principal and counselor recommendations, and their activities, interests, and goals. The NMSC names approximately 16,000 National Merit Finalists each February. Of these, about one-half will receive a National Merit \$2,500 Scholarship, a corporate-sponsored scholarship, or a college-sponsored scholarship.

National Achievement Scholars are selected and funded in a similar fashion and represent the nation's outstanding African-American students. Ideally, the National Hispanic Scholars Program should also be included in this category, but it does not track the enrollment of its scholarship winners. Should it do so in the future, we will include these students in TheCenter's data. In this study, Merit and Achievement scholarships are credited to the main campus if the NMSC Annual Report does not indicate a branch campus.

While the number of National Merit and National Achievement award winners in the entering class provides an indication of the attractiveness of a university's undergraduate program to outstanding students, it is also an indicator that is sensitive to institutional policies on financial aid. Because the number of Merit Scholars is small, relatively small changes in institutional aid policies can have a significant impact on the number of National Merit Scholars enrolling in institutions. The average SAT score provides a broader-based and more reliable measure of overall undergraduate quality; for those reasons, we prefer the SAT scores to the number of National Merit and Achievement Scholars as an indicator of undergraduate quality.

Institutional Characteristics

Medical Schools

Source: NCES IPEDS Completions Survey, MD degrees awarded between July 1, 2005, and June 30, 2006.

Although the IPEDS Institutional Characteristics Survey does have a "medical" field that indicates whether an institution grants a medical degree, we choose not to use its data because it includes

medical degrees in Veterinary Medicine, Dentistry, and other professional health-related fields. For our measure, we determined whether a particular campus awarded any MD degrees during the academic year. If the institution did not submit any data to IPEDS for that year, we then looked at whether it was accredited by the American Medical Association to determine whether the institution has a medical school.

Land Grant Institutions

Source: National Association of State Universities and Land Grant Colleges.

The first Morrill Act in 1862 appropriated federal funds for universities to provide agricultural and technical education to their citizens. A second Morrill Act in 1890 expanded eligibility to include several historically black colleges and universities, and in 1994 several Native American tribal colleges were recognized as land grant institutions. Today, there is at least one land grant institution in each state and U.S. territory and in the District of Columbia. Of the 105 institutions, most are public universities. Federal land grant institutions receive both federal and state dollars in support of their agricultural and extension activities.

While land grant status technically applies to some university systems, such as the University of California and the University of Nebraska, for our study we designate as land grant institutions only those schools that actually perform that function (e.g., UC-Berkeley, UC-Davis, UC-Riverside, Nebraska-Lincoln). In these cases, the land grant field will identify whether an institution is part of a system-wide land grant and whether the vast majority of the activity occurs on that campus. For example, UC-Davis is coded as "Yes-System" while UCLA is coded as "No-System." We consider the 1890 institutions as land grant institutions, but we identify them separately because they do not perform extension activities.

Research Focus

NSF/SRS Survey of R&D Expenditures at Universities and Colleges, FY 2005.

In addition to reporting expenditure data by source of funds, NSF identifies in what major disciplines the money is expended. In the Research by Discipline table we provide the proportion of total and federal expenditures in each discipline for those institutions with more than \$20 million in federal research. These data are useful for developing groups of similar institutions for peer analysis.

The Institutional Characteristics table provides a summary measure of an institution's research strength and concentration based on these discipline-level expenditures. Universities with 95-100% of their federal research dollars spent in one particular discipline are coded as "all." We identify institutions with 75-94%

in one area as “heavy” and label those with 50-74% of their expenditures concentrated as “strong.” Other universities with 25-49% in one or more disciplines we describe as “moderate.” A few institutions (but none in the more than \$20 million group) have expenditures distributed fairly evenly across the disciplines; those we code as “mixed.”

In some cases, where an institution reports as a multi-campus entity, we made adjustments to break out the discipline-level expenditure data by single campus. Typically, this involved moving all or a portion of the life sciences expenditures to the health or medical center campus. IPEDS fall enrollment and graduate degrees by discipline data also were used to help in this effort.

While these data offer some insight as to the research structure of a university, their usefulness is limited. For example, we may be tempted to use the life sciences as a surrogate for medical research, but we must remember that they also include agricultural and biological sciences. Further, the growing trend toward multidisciplinary and interdisciplinary projects may make it more difficult for universities to accurately reflect expenditures by discipline or sub-discipline. TheCenter chooses not to break out these sub-disciplines because the data are increasingly prone to error as further adjustments are made.

Student Characteristics

Fall Enrollment

Source: NCES IPEDS Fall Enrollment Survey, 2005.

Each November, institutions report their current fall headcount enrollment to the IPEDS Fall Enrollment Survey. Enrollment figures include both degree seeking and non-degree seeking students.

TheCenter provides the headcount enrollment by level as presented by IPEDS, along with the percentage of those attending part-time. Graduate students include those seeking specialist degrees in engineering and education. First professional students include those seeking degrees in medical fields, such as Chiropractic, Dentistry, Medicine, Optometry, Osteopathic Medicine, Pharmacy, Podiatry, and Veterinary Medicine, as well as those seeking degrees in Law and Theology.

Each campus in our study submits enrollment data by campus, except for the few institutions identified in our Data Notes section. Because this is an informational item and not one of TheCenter’s nine quality measures, we did not attempt to adjust these figures.

2006 Annual Giving (CAE VSE Survey)	99,683	78,750	Estimate 79% of original per institution.
2005 Total Research Expenditures (NSF)	190,105	116,344	Estimate 61.2% of original per institution.
2005 Federal Research Expenditures (NSF)	110,768	64,689	Estimate 58.4% of original per institution.
University of Kansas Medical Center			
2006 Endowment (NACUBO)	1,049,367	220,367	Estimate 21% of original per institution.
2006 Annual Giving (CAE VSE Survey)	99,683	19,937	Estimate 20% of original per institution.
2005 Total Research Expenditures (NSF)	190,105	73,761	Estimate 38.8% of original per institution.
2005 Federal Research Expenditures (NSF)	110,768	46,079	Estimate 41.6% of original per institution.
University of Maine - Orono			
2006 Endowment (NACUBO)		187,672	Substituted VSE
University of Maryland - Baltimore			
2006 Endowment (NACUBO)		172,770	Substituted VSE
2005 Endowment (NACUBO)	135,944	153,311	Correction. Data provided by institution
University of Maryland - Baltimore County			
2006 Endowment (NACUBO)		43,465	Substituted VSE
2005 Endowment (NACUBO)	13,594	32,918	Correction. Data provided by institution
University of Maryland - College Park			
2006 Endowment (NACUBO)		375,992	Substituted VSE
2005 Endowment (NACUBO)	290,013	332,483	Correction. Data provided by institution
University of Massachusetts - Amherst			
2006 Endowment (NACUBO)	260,228	106,693	Estimate 41% of original per institution.
University of Massachusetts Medical School - Worcester			
2006 Endowment (NACUBO)	260,228	49,443	Estimate 19% of original per institution.
University of Michigan - Ann Arbor			
2006 Annual Giving (CAE VSE Survey)	251,477	251,477	Estimate at least 97% of original per institution. All dollars credited to institution.
2005 Total Research Expenditures (NSF)	808,887	808,887	Estimate at least 97% of original per institution. All dollars credited to institution.
2005 Federal Research Expenditures (NSF)	554,516	554,516	Estimate at least 97% of original per institution. All dollars credited to institution.
University of Minnesota - Twin Cities			
2006 Annual Giving (CAE VSE Survey)	266,992	266,992	Estimate at least 97% of original per institution. All dollars credited to institution.
2005 Total Research Expenditures (NSF)	548,873	548,873	Estimate at least 97% of original per institution. All dollars credited to institution.
2005 Federal Research Expenditures (NSF)	319,771	319,771	Estimate at least 97% of original per institution. All dollars credited to institution.

Data Notes for Universities with Over \$20 Million in Federal Research

University / Statistics	Original Data (dollars in thousands)	<i>The Center</i> Data (dollars in thousands)	Comments
University of Mississippi - Oxford			
2006 Endowment (NACUBO)	421,368	354,370	Estimate 84.1% of original per institution.
2006 Annual Giving (CAE VSE Survey)	55,385	44,751	Estimate 80.8% of original per institution.
2005 Total Research Expenditures (NSF)	91,913	53,677	Estimate 58.4% of original per institution.
2005 Federal Research Expenditures (NSF)	67,603	44,145	Estimate 65.3% of original per institution.
University of Mississippi Medical Center			
2006 Endowment (NACUBO)	421,368	66,998	Estimate 15.9% of original per institution.
2006 Annual Giving (CAE VSE Survey)	55,385	10,634	Estimate 19.2% of original per institution.
2005 Total Research Expenditures (NSF)	91,913	38,236	Estimate 41.6% of original per institution.
2005 Federal Research Expenditures (NSF)	67,603	23,458	Estimate 34.7% of original per institution.
University of Missouri - Columbia			
2006 Endowment (NACUBO)	944,054	638,181	Estimate 67.6% of original per institution.
University of Missouri - Rolla			
2006 Endowment (NACUBO)	944,054	110,454	Estimate 11.7% of original per institution.
University of Nebraska - Lincoln			
2006 Endowment (NACUBO)	1,153,559	749,813	Estimate 65% of original per institution.
2006 Annual Giving (CAE VSE Survey)	125,429	68,986	Estimate 55% of original per institution.
2005 Total Research Expenditures (NSF)	333,126	200,287	Estimate 60.1% of original per institution.
2005 Federal Research Expenditures (NSF)	129,216	74,660	Estimate 57.8% of original per institution.
University of Nebraska Medical Center			
2006 Endowment (NACUBO)	1,153,559	173,034	Estimate 15% of original per institution.
2006 Annual Giving (CAE VSE Survey)	125,429	37,629	Estimate 30% of original per institution.
2005 Total Research Expenditures (NSF)	333,126	123,263	Estimate 37% of original per institution.
2005 Federal Research Expenditures (NSF)	129,216	49,282	Estimate 38.1% of original per institution.
University of Nevada - Las Vegas			
2006 Endowment (NACUBO)		121,177	Substituted VSE
University of New Hampshire - Durham			
2006 Endowment (NACUBO)	234,682	211,214	Estimate 90% of original per institution.
2006 Annual Giving (CAE VSE Survey)	13,733	13,733	Estimate at least 97% of original per institution. All dollars credited to institution.
2005 Total Research Expenditures (NSF)	108,378	108,378	Estimate at least 97% of original per institution. All dollars credited to institution.
2005 Federal Research Expenditures (NSF)	78,653	78,653	Estimate at least 97% of original per institution. All dollars credited to institution.
University of New Mexico - Albuquerque			
2006 Annual Giving (CAE VSE Survey)	48,481	48,481	Estimate at least 97% of original per institution. All dollars credited to institution.

Data Notes for Universities with Over \$20 Million in Federal Research

University / Statistics	Original Data (dollars in thousands)	<i>The Center</i> Data (dollars in thousands)	Comments
University of Oklahoma - Norman			
2006 Endowment (NACUBO)	960,315	662,617	Estimate 69% of original per institution.
2006 Annual Giving (CAE VSE Survey)	121,503	97,202	Estimate 80% of original per institution.
2005 Total Research Expenditures (NSF)	173,663	105,934	Estimate 61% of original per institution.

2005 Federal Research Expenditures (NSF)	80,222	80,222	Estimate at least 97.7% of original per institution. All dollars credited to institution.
2006 Annual Giving (CAE VSE Survey)	54,116	51,356	Estimate 94.9% of original per institution.

The Center for Measuring University Performance Advisory Board

Arthur M. Cohen

Professor Emeritus
Division of Higher Education
Graduate School of Education and Information Studies
University of California, Los Angeles

Larry Goldstein

President, Campus Strategies
Consultant, NACUBO

Gerardo M. Gonzalez

University Dean, School of Education
Indiana University

Roger Kaufman

Professor Emeritus, Educational Psychology and Learning
Florida State University
Director, Roger Kaufman & Associates
Distinguished Research Professor
Sonora Institute of Technology

Gordon C. Winston

Orrin Sage Professor of Political Economy, Emeritus
Director, Williams Project on the Economics of
Higher Education
Williams College
