Elizabeth D. Capaldi Phillips (1945-2017)

We had to call her Betty, in spite of her high powered academic credentials testified to by an endless sequence of publications, a litany of presentations, honors, and awards. She came to every task, whether research, academic administration, student success, publication, institutional organization, university budgets and finance, or institutional advocacy with focus and intensity leavened by charm, imagination, and humor. Betty worked harder than any of us. She wore us out with her enthusiasm and commitment to getting things right. And she inspired us with her unshakable belief that whatever needed doing could be done if we just worked harder, collected the data better, analyzed the information we had more thoroughly, and most importantly, did something useful and significant to move the university forward.

In looking back over an exemplary person's life we can never capture it fully whether we recall favorite anecdotes or critical accomplishments. Sometimes, though, it helps to divide up an extraordinary lifetime of achievement into categories, for Betty provided us with what it would have taken at least three ordinary academics to achieve. As we look at each one separately, we need always remember, that Betty pursued all of them simultaneously at the highest level of performance.

Her academic life rests on the foundation of innovative, deep, scientific research in cognitive psychology. We, who encountered Betty along the way, quickly learned that this research involved complex experiments of such significance that the NSF and NIMH provided continuous support for over 35 years and the results of this work appeared in an endless series of scientific articles in specialized journals. The associations of her scientific peers found Betty's work of such importance and her commitment to the profession so significant that they elected her to leadership roles including the presidency of their various organizations such as the American Psychological Society. And her achievements in experimental psychology provided the context and substance of her collaboration on a long running multi-author textbook in the field, now in its fourth edition, and her forthcoming book based on her long career of research in the field on *The Psychology of Eating* (Routledge).

A second simultaneous career evolved from the respect she inspired in her university colleagues, whether first as Head of the Department of Psychological Sciences at Purdue University and then through her leadership of the Institutional Research Office and subsequently Provost at the University of Florida. But it didn't stop there. The remarkable achievements in university administration, the innovative programs for student success begun at Florida and further developed at Arizona State University, the exceptional commitment to the development of university research seen in the dramatic expansion of funded investigations and research institutes and centers at UF, at the University at Buffalo and the SUNY system, and then in the expansion of the Arizona State University research portfolio, all testify to her ability to create, identify, support, inspire, energize, and, yes, drive high performance initiatives in a

wide range of academic disciplines. Her commitment to university research prompted her sustaining work on the annual *Top American Research Universities* report since its first edition in 2000. Students recognized her commitment to their academic success awarding her elected membership in the *Friends of Students Hall of Fame* and her selection by Student Government for the *C. Arthur Sandeen Improving the Quality of Life Award*, both at the University of Florida.

But as if these two were not enough, Betty's colleagues discovered early her third gift of explaining complicated things to different audiences. Group after group, organization after organization, inundated her with invitations from academic, scientific, and public groups to lecture, talk, and consult on topics ranging from the science of eating to the best systems for managing university budgets to the process of enhancing productivity and quality in complex university settings. She could explain anything to anyone in a fashion that captured the essence of the subject and the importance of the issues with a style that held the audience's interest and inspired their understanding. Legislators, donors, faculty, administrators, students, trustees, and general audiences all fell under her magic explanatory spell.

When we try to capture this remarkable individual's life and work we can only hope to provoke the memories of her friends, colleagues, collaborators, and beneficiaries. But perhaps a fine token of her remarkable talents can be found in a recent initiative: *Eating Psychology with Betty*, a TV production sponsored on PBS by Arizona State University. In thirteen full episodes from March to October 2016, Betty took a lifetime of scientific research, writing, and teaching on nutrition, eating, and obesity, and applied it to how we should think about food, diet, and cooking. Here, in these thirteen episodes, we can see her expertise, her charm, and her skillful ability to capture both research-validated substance and human interest and engagement. As always, as she works with her colleagues on the show, we can see so clearly that she knows whereof she speaks, and we recognize that we should do what, in her graceful engaging way, she tells us we should do.

All of us who had the opportunity to participate in one or another aspect of Betty's world know that we were provided a unique privilege, and for that she will remain always in our memories.

INTRODUCTION

This edition of the *Top American Research Universities* follows the format and structure of previous reports and includes an introductory essay and an extensive display of tables that illustrate the measures we have followed for many years. As is our practice, we also include a discussion of data issues and adjustments required to maintain reasonable comparability across the years of this project. The Center for Measuring University Performance (MUP) also maintains the data that underlie and extend the materials included in this printed report at the MUP website [<http://mup.asu.edu>].

As most of our readers know, this project has enjoyed strong support from multiple institutions from its beginning at the University of Florida and the University of Florida Foundation in 2000 and continuing with additional assistance over the years from the University at

Buffalo, Arizona State University, and the University of Massachusetts Amherst and we appreciate their continuing commitment to our work.

However, it is with great sadness that we report the passing of Mr. Lewis M. Schott (1922-2017) who was our initial benefactor, and a constant and enthusiastic friend, throughout the years. A celebration of his life as a major supporter of many projects and programs at the University of Florida and elsewhere included the comment that “for all the institutional significance of his contributions to the university's work and activities, Lewis was inspired by people, individuals who needed his help and whose work he appreciated. For all his stellar accomplishments, and a resume that leaves us in awe, Lewis was a wonderful friend, wise as an advisor, and steadfast in his beliefs.” [<http://jvllone.com/schott.pdf>]

American Research Universities in an Era of Change: 2006-2015

John V. Lombardi and Diane D. Craig

Who Are We?

Over the years that we have measured various aspects of America's most competitive research universities, we have sought to identify the elements that characterize these institutions within the larger context of the higher education industry. Measuring colleges and universities is no easy task, as the endless surveys and ranking schemes demonstrate when they attempt to pinpoint the features that distinguish one institution from another. The task is complicated by the difficulty of describing the structure of the higher education business, reflected in the imprecision of the words we use. We speak of colleges and universities as if these words identify institutions belonging to a reasonably well defined universe when the terms cover a wide range of significantly different institutions designed to impart some element of knowledge or skill to some subset of the population.

We generally expect that colleges and universities are places that engage young people who have recently completed the equivalent of 12 years of schooling, but we also include older individuals whose life experience encourages them to acquire additional information or skills. We sometimes talk about higher education as being a process in which individuals learn how to become proficient at some skill or profession. We expect higher education to transfer important values and standards, we think higher education should serve as a vehicle to enhance equity and social justice, and we expect the industry that accomplishes this to be of high quality, inexpensive, efficient, effective, and inclusive.

Our students are often clearer about college and university, and simply refer to the institutions that make up this industry as schools. They say "Where did you go to school?" When they mean "What institution of higher education did you attend?" or "Where did you earn your degree or certificate?" This simplification clarifies what the institutions do by recognizing that the fundamental functions of all these places are instructional. Instruction provides the common link among most of the institutions that make up America's higher education system.

Almost all efforts to provide a clear taxonomy of American higher education fail to achieve precision because the range of institutional variation around common types is wide. We have what we call four-year colleges, institutions that

provide programs leading to a baccalaureate degree. We take some comfort in this designation even as we know that an elite private college with a large endowment, small classes, primarily residential and well-qualified students, highly trained and credentialed permanent professors, and elegant facilities is not operated in the same fashion as a small rural state college campus with modest facilities, predominantly commuter students, many under-prepared students, significant numbers of part-time adjunct faculty with basic credentials, and fragile budgets. We know that small private colleges with enrollment below 1,500 and minimal endowments operate on the thinnest of margins and live from year to year with the possibility of fiscal failure and extinction while large state flagships and prestigious private research universities may face financial challenges but never contemplate bankruptcy.¹

As a rough indication of the scale of American higher education, the National Center for Educational Statistics (NCES) reports the existence of some 4,583 degree granting institutions (a number that understates the total number of separate institutions since branch campuses are sometimes reported with the main campus). Of these, 3,004 are four-year campuses and 1,579 are two-year.

Although this gives a general notion of scale, it is useful to further separate the institutions by control or ownership: public or private. About a third of all institutions (1,620) are public, and of these publics 710 are four-year and 910 are two-year. The other two-thirds (2,963) are private, and of these some 1,701 are nonprofit and 1,262 are for-profit. Among the nonprofit private institutions, 94% are four-year (1,594) while among the for-profit institutions, 55% are four-year (700). In conversations about higher education we often find that many observers do not fully recognize that four year nonprofit privates outnumber public institutions by more than two to one.

This landscape is further complicated by the distribution of students among the various types of institutions. In Fall 2015 there were some 20 million students in degree-granting colleges and universities. Of those 15.6 million (or 73 percent) were in public institutions and 4.1 million in nonprofit private colleges and universities. However, the subdivisions and categories used by NCES are many. For example, in the group of public institutions, in an admirable effort to create a detailed taxonomy of higher education institutions, NCES provides information within the following categories:²

Research university, very high
 Research university, high
 Doctoral/research university
 Master's
 Baccalaureate
 Special-focus
 Arts, music, or design
 Business and management
 Engineering and other technology-related
 Law
 Medical schools and centers
 Other health professions
 Tribal colleges
 2-year
 High transfer institutions
 Mixed transfer/career and technical institutions
 High career and technical institutions
 Special-focus 2-year
 Health professions
 Tribal colleges
 Other programs

This short summary provides a glimpse into the complexity and diversity of higher education institutions and contexts in the US and helps explain the difficulty in generalizing about “American higher education.”³

The Operation of America's Higher Education Industry

All of these institutions, whatever their variety and complexity, share a commitment to schooling, providing training that meets a broad but nonetheless mostly standardized set of expectations, established and enforced by the accreditation process that certifies them eligible for federal financial support. We define the schooling through the designation of various levels of student accomplishment recognized by the award of degrees: Bachelors, Masters, and Doctoral degrees, but with a complex nomenclature that specifies various subcategories within these degrees: Bachelors of science or arts, Masters of business administration or public health, Doctors of philosophy or education.

While all this variety offers endless opportunity to those who participate in these schools, the complexity also reflects the competitive needs of the higher education industry. Colleges and universities constitute a highly competitive marketplace that sells relatively standardized services to a wide range of customers. Although the rhetoric of education imagines an enterprise that seeks a common benefit for society through the preparation of citizens capable of contributing to a prosperous community, American schooling has always been a process for training occupationally successful individuals to play significant roles in society. The nation at large surely benefits from the trained people schooled in colleges and universities, but the participants engage these institutions in search of the personal benefits that result from their educational work. Even when we look at society's gains from education, they are not the result of preparing people with the best attitudes and values but from the necessity of prepar-

ing productive citizens whose schooling makes them effective at producing and delivering the goods and services that drive the American economy.⁴

The institutions that make up the higher education industry offer a wide range of elegant explanations of mission and purpose, but their behavior recognizes that their first priority is to attract sufficient business to generate the revenue needed to survive. Once survival is ensured, the institutions then compete to expand their reach and enhance their resources. This behavior can look much like the commercial behavior of other American business enterprises that expand to capture additional revenue, increase economies of scale, and generate higher value to their owners. However, colleges and universities (and here we speak of the nonprofit sector) have no stockholders. Their owners, whether the citizens of a state for public or trustees for private universities, do not operate to generate a profit for owners nor do the owners receive any significant direct personal benefit from the success of the institutions. Instead, the colleges and universities optimize a different set of characteristics.

Most colleges and universities compete to acquire within their institutional domains the highest level and the largest amount of quality possible. Some institutions focus on acquiring the highest quality student body, some seek the greatest research presence and the most qualified and competitive faculty, some compete to acquire quality in every institutional aspect. In almost every case the goal is to enhance the institution's capabilities and quality.⁵

The schools then sell the opportunity to participate in the enterprise to many customers. They sell students the chance to be part of the high quality campus intellectual and social life, they sell industry the opportunity to acquire the highest quality graduates, they sell the government the opportunity to invest in the production of research results that can enhance the national economy, and they sell donors the opportunity to associate with the best as they give money to further the institutional competition for quality.⁶

Although a common notion imagines that universities take in students, process them in some fashion, and graduate them, creating a product that then goes into the American employment marketplace, this is not exactly how it works. Instead, the schools create an enterprise that sells students and parents the opportunity to participate and take away some individual value from that participation. In this view schools are more like orchestras or opera companies than commercial enterprises. An orchestra's primary goal is to accumulate the musicians and other personnel who have the highest quality possible and then sell the opportunity for others to experience this quality through concerts and other performances. The transaction is surely financial, but a nonprofit orchestra does not generate revenue for its owners, and those who pay to experience a quality concert seek no

tangible element but only the personal and individual value they derive from an encounter with a quality performance.

In this model the transaction requires no exchange of product but only an individual purchaser's right to enjoy and benefit personally from the quality displayed. A key characteristic here is that the value to the consumer is individually determined. Not all members of a concert audience will take away the same benefit from the same performance. Some, with extensive musical backgrounds and perhaps talent, will understand and take away a complex and sophisticated understanding of the performance, the artists' talents, the significance of the conductor's choices, and the context of the composers' creativity. Some, will simply enjoy the music. Others, may decide they do not need this experience, and leave at intermission. While everyone in the audience has the same opportunity, and participates in the same experience of the performance, the benefit achieved by each attendee will vary significantly.

This rather abstract conversation offers some insight into the nature of America's higher education industry and helps explain the behavior of these institutions. Indeed, while perhaps something of an exaggeration, it is not too far off to say that the vast majority of accredited not-for-profit higher education institutions in America (of whatever size or characteristics) provide a reasonable undergraduate education. We know this not because we have excellent well established quality tools to measure the efficacy of a higher education institution but because the graduates of these places, of widely varying characteristics, generally become adults who perform well with good to exceptional lifetime records. Every college has a roster of distinguished graduates whose accomplishments the institution celebrates with the implied notion that these stellar achievements rest on the schooling provided at an earlier time. The data also show that having participated in any college and especially acquiring any post-secondary credential produces higher lifetime earnings than a high school credential alone.

Because the educational content of colleges are more or less academically equivalent, the key element for many is the opportunity to associate with and participate in a high quality environment rather than the guarantee that one environment or another will provide better schooling. Students compete to enter elite colleges to participate with other elite students in elite contexts, not because the elite school can guarantee that the chemistry they learn will be different from or better than the chemistry available at a nearby regional public campus. Indeed, what the customers seek is access to the quality elements assembled inside the college or university. Were it otherwise, the institutions would promote the rigor of their coursework, the challenge of achieving graduation, the competitive skills acquired measured against standardized external metrics, and not the context and experience of attending the college.⁷

Innovation, Change, and Competition

Over the years, the nation has argued about the roles, functions, styles, and values of colleges and universities. In the effort to adjust to the ever-changing international marketplace and the restructuring of enterprises in response to a highly technology-driven post industrial world, universities have modified a number of their operational practices to accommodate these external changes. Many of these modifications reflect the rapid introduction and spread of technology. Of all the technologies that often seem to overwhelm past practices, communication is one of the most significant for colleges and universities.

This is because schooling is mostly about communication between students and teachers, among research personnel, and between university people and others outside the university. Translating the new technologies to match and enhance the schooling styles and expectations of students and teachers and reconfiguring colleges to effectively use new technologies has provided endless examples of innovation and experimentation. Yet the traditional structure of classroom and teacher, assignment and testing, projects and laboratories remains the predominant modality for schooling in spite of the dramatic spread of computer-mediated distance education and the tremendous interest in MOOCs.⁸

The issue here of course is the distinction between the transmission of information and the participation of students. Information has always been available as demonstrated by the long-term commitment to public libraries in almost every American community. The electronic innovations brought by the Internet and the ubiquity of relatively affordable computing devices has expanded and facilitated the availability of information. But information is not schooling, for schooling requires a selection of a subset of information and the packaging of that information with a variety of tool skills that permit its effective use. Availability of information is much less valuable than the skills that make information useful. Providing skills is more complicated than providing information, and as a result, colleges and universities have changed less rapidly in recent decades than other industries that rely on information and technology.

This communication expansion has, nonetheless, had multiple consequences for colleges in the techniques and styles of instruction and in the organization and operation of the institutions. One of the most significantly visible consequences has been the dramatic redefinition of the role and function of university and college libraries. Once places for books and the quiet pursuit of information, libraries have dramatically reduced their on-site book inventories and transformed their physical facilities into student-focused educational support operations. Learning commons, where students gather individually or in groups to work on projects and engage with electronic resources, are now common features on almost every campus. The libraries no

longer seek the largest physical collections but instead subscribe to electronic databases of scholarly and other materials, relegating their previous, often extensive, book collections to remote storage. Librarians become experts in technology and information search and retrieval, they assist students in completing course work and faculty in using electronic resources for research. They struggle with the redefinition of their functions and purpose as it changes from custodian of core institutional information resources to facilitator of access to remotely maintained data and materials essential to university work.

The quality of libraries is no longer determined by the total size of a physical collection but by the adequacy of subscription access to current, remotely stored, information resources available to all. The prestige element of a library now tends to rely on the existence of unique physical resources in special collections of the institution. Of course, even here, the library with a special unique collection may well find the means to digitize it and provide it to the world, thereby reducing the uniqueness of the institution's physical resource. The library is a bell weather of the ability of higher education institutions to adapt to the opportunities of technological change without fundamentally changing the underlying academic structure of teaching and research.⁹

If we were to rely only on what appears in the media about colleges and universities we might come to believe that the industry is in great crisis, that dramatic change is in the offing or well underway, and that the institutions we know today will be radically different tomorrow. Some of this comes from the financial difficulties experienced by all of higher education throughout the early years of the 21st century, felt most severely during the economic downturn of 2008, and followed by the slow recovery since. Public universities and colleges saw a significant decline in state funding that has recovered some but not fully in the post-2008 years. Public institutions substituted tuition dollars for state funding to some extent but not enough to recover the lost public support. They also aggressively recruited out-of-state students and international students who paid higher prices and received smaller discounts. Private institutions reliant on endowment returns, suffered significant losses in the economic recession and also raised tuition although they had been adjusting tuition upward as a normal process throughout the years.¹⁰

Yet as nominal college prices rose, both public and private institutions found it necessary to expand traditional price discounting to acquire sufficient students to sustain their scale and operations. Something on the order of 80% of all students receive some type of tuition discount from their institutions with the overall discount rate for private institutions reaching 50% or more. All institutions expanded fund raising operations and launched significant to magnificent campaigns to raise funds for operations, capital, and schol-

arships. With all the national interest in college and university sticker prices, however, few focused on the fact that the net revenue from tuition and fees almost never covers the cost of the educational experience provided. Instead, institutions draw on endowment, annual giving, and state subsidies to cover the expense.¹¹

Institutions also instituted new programs to increase revenue. Small private colleges, as well as most universities, expanded masters degree and certificate programs, both online and residential, tailored to specific occupational specialties. These programs, because they are designed to enhance the earning power of their graduates, do not generally discount tuition and are profitable compared to standard bachelors degree programs that generally require a subsidy. Most institutions also expanded their online educational initiatives to capture student constituencies outside the traditional group of 18-24 year olds. These new customers are often adult learners, returning working students who need to complete a degree, or professionals seeking an all online degree or certificate. Such students may not require a tuition discount, and the programs, if operated at scale, can be significant revenue earners. Institutions also developed collaborations with for-profit enterprises to leverage commercial efficiencies on behalf of university or college operations.¹² All of this innovation can give a sense of great change, but perhaps the visibility is more dramatic than the fundamental change it reflects.¹³

As an example, in most of the innovative revenue-generating activities, one of the key values provided is not the content (which in most cases is generic: algebra is algebra, accounting rules are standard) but the institutional brand attached to the content. MOOCs become significant when endorsed by Harvard and MIT; for-profit educational service providers are made legitimate when accredited or covered by the brand of Purdue University. This tells us that the core competitive issues for colleges and universities remain much the same, even if expressed through new modalities enabled by technological and pedagogical innovations. Would a MOOC sponsored by a small rural state university campus have the same viability as one sponsored by MIT, even if the curriculum and programs were identical? Would Kaplan have made a deal with a little known private college rather than Purdue? Probably not.¹⁴

As a result, the primary driver of college and university prestige and reputation remains the acquisition of internal quality (faculty, students, facilities, research accomplishments, sports teams, student life amenities, and other highly visible internal assets). This constant pursuit of internal quality explains the relative stability of the general higher education marketplace, and especially the persistence of institutional success (as reflected in our core measure of annual federal science and engineering research expenditures) among the top research universities.

To be sure, some universities decline or rise as measured by one or another indicator. Among public research universities, for example, the change in state funding has been dramatic, but in spite of the reductions, other indicators of university performance do not appear to have been significantly impacted. This is because these institutions identified the resources needed to buffer short term changes, buy the time required to readjust expenditures and redesign program delivery methods, and the opportunity to invest in new revenue enhancing activities. Much the same is true of private research universities that have traditionally had large endowments and effective programs of annual giving. Absent a tradition of significant public tax based support, private universities have always been better prepared for changes in the economy. They move quickly to adjust, delaying large projects, readjusting expenditures, eliminating programs, and otherwise dealing directly with both the income and expenses of their operations. They too innovate and redesign programs and instructional modalities, but rarely undermine the core design based on the acquisition of internal quality.

For example, among the 125 public research universities we study (defined in the Appendix), the median contribution of state appropriations to total revenue (including investment income) between 2006 and 2015, after often steep reductions followed by partial recovery, declined by 5.7 percent. The experience of public institutions over this decade varied widely as different states pursued different policies in adjusting to declines in state revenue and increases in requirements for high priority state services. As the table below indicates, the largest percent reduction in state appropriations as a percentage of university revenues reached 21% while the largest percent increase over the decade reached almost 6%. In dollar terms, the top increase in state appropriations produced a \$215 million increase while the largest reduction was \$179 million. This helps illustrate the difficulty of generalizing about individual institutional experiences from aggregate data.

In looking at the state contribution to institutional revenue, it is important to recognize that even if a state increased its dollar contribution to a university's revenue, the percentage

of state funding within a university's overall revenue may nonetheless have declined because the institution raised tuition and fees or generated funds from many other sources that increased revenue even more. As a result, an increase in state appropriations may represent a smaller percent of a large total institutional revenue. For example, with the median net change in state contribution to institutional revenue declining by 5.7 percent, the institutions nonetheless experienced a median increase in state appropriations from 2006 to 2015 of about \$6.8 million. As the table above illustrates, the median change in net tuition and fee dollars as a portion of total revenue for the 125 institutions reached 6.5 percent or \$124 million.

The most successful public research universities show a somewhat different profile. Between 2006 and 2015, the top 10 public universities, measured by 2015 federal research expenditures, saw the state contribution to their revenue drop by a median of 4.7 percent. However, like other universities, these institutions identified a range of income sources beyond state dollars so that state revenue contribution as a percentage of total revenue declined even as the median state contribution in dollar terms increased by about \$2 million. Of course, in the worst case among these top ten, the reduction in the state percentage contribution to revenue also reflected a net loss of state funds over the 2006-2015 period of \$55 million. Among these top 10, all increased their tuition's share of the total budget over the past decade. While the median change in percentage of net tuition and fee dollars was somewhat lower than their public counterparts at 4 percent, the median increase of \$250 million was much greater.

In our work, one of the more useful indicators of research university performance has always been the annual federal research expenditures. Although changes in state support of public research universities over the decade 2006-2015 caused considerable institutional stress, required many readjustments in university operations that affect employment, restructured services, prompted outsourcing, encouraged the development of new programs and the elimination of others, the research mission of most of these institutions remained strong. The median increase in federal research

Top Public Research Universities: Change from 2006 to 2015 in State Funding, Tuition, Students, and Research

Public Research Institutions by Federal Research Expenditures	Net Change in % of State Appropriations	Net Change in State Approp \$ (000s)	Net Change in % of Tuition & Fees	Net Change in Tuition & Fees (000s)	Percent Change in Fall Enrollment	Net Change in Fall Enrollment	Percent Change in Federal Research	Net Change in Federal Research \$ (000s)
Top 125 Public Research Institutions								
Median	-5.7%	\$6,764	6.5%	\$124,380	12.1%	2,504	20.8%	\$10,512
Maximum Increase	5.9%	\$215,140	22.3%	\$720,556	98.2%	18,867	708.7%	\$290,312
Max Decrease/Min Increase	-21.1%	-\$179,132	-16.9%	-\$1,864	-16.6%	-4,921	-58.3%	-\$35,741
Top 10 Public Research Institutions								
Median	-4.7%	\$2,191	4.0%	\$250,186	7.9%	3,106	31.1%	\$143,652
Maximum Increase	-1.8%	\$184,734	10.0%	\$720,556	39.6%	7,098	112.6%	\$290,312
Max Decrease/Min Increase	-12.1%	-\$55,001	2.1%	\$140,772	0.6%	276	-0.2%	-\$1,102

expenditures among these 125 reaches 21% or an increase of \$10.5 million. Among the top 10 research performers the median increase was 31% or about \$144 million. As we have identified over the years in these annual reports, the success of America's public research universities in the federal research competition has been remarkably stable with most of the same institutions continuing their success over the decades. Indeed, even in the difficult times reflected in the 2006-2015 data, the best predictor of the growth in annual federal research expenditures of these institutions is the amount of research expenditures in 2015 (a correlation of .80).

The experience of 49 private research universities over this decade follows much the same pattern as observed among the 125 public institutions, although net tuition and fee dollar increases were slightly higher in the public sector, no doubt reflecting the tuition and fee adjustments made by private institutions over many previous years without the need to adjust to substantial changes in state appropriations. In addition, private institutions showed median increases in federal research dollars that somewhat exceeded those of their public counterparts. However, given the wide range of research performance among these top institutions, both public and private, clear distinctions are difficult to draw. As is the case with public institutions, the best predictor of the change in federal research expenditures between 2006 and 2015 is the amount of federal research expenditures in 2015.

If these high powered, prestigious public and private institutions appear to have managed the transition across the 2008 recession reasonably well, a counter example appears at the other end of the higher education industry among small private colleges with enrollments around 1,500 or less. These institutions are vulnerable to all the forces that challenge higher education. Deferred maintenance, declining college age populations, lower transfer rates from community colleges, higher percentages of tuition discounting to acquire sufficient student numbers to survive, and of course constant competition from public institutions with lower tuition and support from the remaining state subsidies. Between 2005 and 2015, 44 private nonprofit four-year institutions ceased operation. Of these 28 disappeared in the first five years and 16 additional in the second five years.

These institutional failures have attracted significant attention in the higher education press and lend some substance to the notion that American higher education is in a major existential crisis. However, while 44 institutions are a significant number, especially for their alumni, current students, and employees, they represent only 3 percent of institutions in this category and by the time of their failure often had very small remaining enrollment. Although not the topic of this paper, it should be noted that 122 for-profit two-year institutions also failed in the same ten-year period. As a related development, some state systems dealt with small campuses that fell below some reasonable level of survival by combining institutions or institutional

Top Private Research Universities: Change from 2006 to 2015 in Tuition, Students, and Research

Private Research Institutions by Federal Research Expenditures	Net Change in % of Tuition & Fees	Net Change in Tuition & Fees (000s)	Percent Change in Fall Enrollment	Net Change in Fall Enrollment	Percent Change in Federal Research	Net Change in Federal Research \$ (000s)
Top 49 Private Research Institutions						
Median	6.5%	\$121,053	11.8%	1,243	19.5%	\$18,002
Maximum Increase	18.5%	\$409,012	67.8%	10,012	152.6%	\$681,540
Max Decrease/Min Increase	-3.8%	\$5,370	-30.6%	-3,471	-48.9%	-\$17,840
Top 10 Private Research Institutions						
Median	1.5%	\$184,961	12.8%	1,972	26.5%	\$120,950
Maximum Increase	6.5%	\$622,934	30.0%	10,012	52.1%	\$681,540
Max Decrease/Min Increase	-3.0%	\$54,303	-4.3%	-767	2.2%	\$10,288

Note: As is often the case in measuring federal research expenditures, the Johns Hopkins University totals distort some indicators. The maximum increase in the table above would be \$144.1M rather than \$681.5M if we exclude Johns Hopkins.

As an additional recognition of the adjustments made by both public and private research universities in our group, we can observe that almost all institutions, public or private, increased enrollment (all credit earning enrollment) during this period. While the increase reached about the same percentage for the median institution in both groups, the public institutions, increased by just over twice as many students, reflecting the larger student bodies involved. It seems likely that these increases reflect not only strategic pursuit of greater scale but also revenue, for both public and private institutions the median increase in enrollment was accompanied by higher net tuition revenue.

management without necessarily eliminating the physical places.¹⁵

The Constant of Change

The challenge of capturing the changes currently underway in American higher education is to recognize the significance of many trends while at the same time understanding the flexibility and adaptability of this educational industry. Change is a constant of American higher education, and the institutions are remarkably skillful at adopting and absorb-

ing the effects of changes in the external environment without damaging continuing operations or substantially modifying the competitive structure of the business.

Each generation of students, faculty, staff, administrators, legislators, and citizens imagines that the changes of their time represent a critical moment that may force America's colleges and universities to become dramatically different in some fundamental way. And yet, crisis after crisis, the higher education enterprise slowly absorbs the changes that become necessary. Institutions readjust their operations to accommodate destructive pressures on one side and capture emerging opportunities on the other.

To be sure, the universities of today are different in many ways than they were in the 1970s or 1980s. But they still fundamentally operate on much the same basis, compete for the same elements of quality that continue to determine success and reputation, and engage in a constant and endless pursuit of the money that permits them to buy the essential elements of quality. Many of the trends apparent in the past decade or so will continue. Public university state funding will remain a challenge as the many other demands on tax dollars will continue to crowd out higher education needs. Moreover, we anticipate significant differences by state and by institution that make reliable overall predictions about the higher education industry based on aggregate data much less useful for understanding the circumstances of individual institutions.

Those states with growing populations in the 18-24 year-old category will likely see increased state revenue related to enrollment. Moreover, as states introduce various mechanisms of performance-based funding, generally indexed to graduation rates, employment success, or similar measures, the elite public institutions will fare significantly better than others in their states because the elite institutions already have high graduation rates and their graduates already find good employment or significant graduate educational opportunities. This is a function of institutional selectivity which ensures that well-prepared entering students produce successful graduates. Those institutions with less selective admissions struggle to overcome whatever educational deficits some students may have and find it much more difficult to meet high graduation and employment metrics. They also have many students with financial challenges who may take longer to graduate or drop out to take jobs. Institutions, both public and private, in states with declining populations will find recruitment and retention of students much more difficult.¹⁶

The marketplace of 18-24 year-olds appears to have leveled out primarily as a result of stagnant population growth and the already high level of participation in college, making enrollment growth difficult for less selective institutions. This development places increasing pressure on small

public institutions and marginally funded private colleges without the name brand, extensive program options, and resources of more competitive institutions. We can expect these institutions to introduce post-baccalaureate certificate and degree programs and invest in various online education products to allow them to reach more distant audiences and adult and other under-served populations. Whether these strategies will succeed remains to be seen as these marketplaces are increasingly being served by large public institutions and other perhaps better funded providers.¹⁷

As is always the case in American higher education, the best institutions (those with the highest levels of internal quality and thus prestige), whether public or private and whether four year undergraduate colleges or major research universities will continue to prosper, modifying, innovating, and readjusting their programs and activities to take advantage of changes in the economy, in the technologies available for higher education, and in the competitive marketplace for sustaining and renewing institutional quality. Others, less well endowed, less well funded from public sources, challenged to maintain student quality and numbers, and reaching a limit on the net tuition they can collect, will struggle. They have already seen significant changes in curricular structure, in the balance between part-time contingent and tenure or tenure-track faculty, and in the engagement with various systems of technology enabled instruction.

If we were to predict the future structure of American higher education, it does not take much insight to imagine that the separation between elite, semi-elite, generic, and struggling institutions will grow greater. The demographic pressures, the financial challenges, the advent of technology enhanced national competition will all provide an increasing advantage to the elite, the selective, and the well funded. Some number of small colleges will continue to fail, although it is hard to predict the scale of this change. While the elite continue to prosper, mid-range comprehensive universities will experience the greatest change as their faculty continue the trend towards majority part-time and contingent instructors, their programs become increasingly occupationally focused, and they seek combinations, collaborations, and mergers to enhance their scale and competitive position. Some innovations and transformations will be dramatic such as the creation of the Purdue-Kaplan institution, some will be prosaic such as the increased outsourcing of college and university administrative and operational functions.

Yet throughout, the long-standing trends of American higher education are likely to prevail: continuing readjustments to respond to external expectations, opportunities, and constraints performed against the constant background of the intense competition for internal quality.

- 16 For an example of the differential impact of performance-based funding models see the results for the State University System of Florida, *Performance Funding Model* at [http://www.flbog.edu/board/office/budget/performance_funding.php].
- 17 For an interesting presentation on the impact of changing population composition on college enrollment see Luke Juday, "The Demographics of Declining College Enrollment," *Stat Chat, Demographics Research Group*, University of Virginia, October 2. 2014. NCES in "The Condition of Education, Undergraduate Enrollment" (May 2017) provides projections that anticipate flat to gradually rising enrollments nationwide through 2026 [https://nces.ed.gov/programs/coe/indicator_cha.asp]. A short-term view of enrollment changes is available from the *National Student Clearinghouse*, "Current Term Enrollment Estimates - Spring 2017", Research Center, May 23, 2017 [<https://nscresearchcenter.org/currenttermenrollmentestimate-spring2017/>].

APPENDIX

The appendices list the institutions studied and their change between 2006 and 2015 on four key variables: percentage of state appropriations in budget, percentage of net tuition and fees, fall enrollment (undergraduate and graduate), and federal research expenditures. The 174 institutions (125 public and 49 private) included in this study are those that ranked in the top 200 on federal research expenditures between 2006 and 2015. We then excluded those with missing data that could not be reasonably estimated and standalone medical or specialized institutions.

Some universities changed how they report over the ten-year period and we had to combine campuses to make the data comparable. While we prefer to maintain the single campus approach as found in our annual Top American Research University tables for this exercise we felt it was important to leave these institutions in the analysis given their high research performance over the years and the dominance, among most campuses, of the main campus. The combined data are reflected in the institution's name

and include Penn State, Rutgers, Texas A&M, Tennessee, Connecticut, Kansas, and Mississippi. Though we attempt to account for any reporting changes, we recognize there may be others missed as IPEDS data definitions change and how those definitions are interpreted may vary over time within an institution and between institutions.

Finance variables used:

IPEDS Finance GASB - Publics

- F1B01 Net tuition and fees
- F1B11 State appropriations
- F1B25 Total revenue

IPEDS Finance FASB - Privates and a few publics

- F2D0 Net tuition and fees
- F2D03 State appropriations
- F2D18 Total revenue (2006)
- F2D16 Total revenue (2015)

Table A-1. Top Public Research Universities: Change from 2006 to 2015 in State Funding, Tuition, Students, and Research

2015 Federal Research (\$000)*	Institution	Net Change % of State Approp	Net Change in State Approp \$ (\$000)	Net Change in % of Tuition & Fees	Net Change in Tuition & Fees (000s)	Percent Change in Fall Enrollment	Net Change in Fall Enrollment	Percent Change in Federal Research	Net Change in Federal Research \$ (\$000)

*Cornell's 2015 Federal Research is based on preliminary estimate.

Part I – The Top American Research Universities

The Center for Measuring University Performance determines the Top American Research Universities by their rank on nine different measures: Total Research, Federal Research, Endowment Assets, Annual Giving, National Academy Members, Faculty Awards, Doctorates Granted, Postdoctoral Appointees, and SAT scores. (The Source Notes section of this study provides detailed information on each of the nine indicators.) The tables group research institutions according to how many times they rank in the top 25 on each of these nine measures. The top category includes those universities that rank in the top 25 on all nine indicators. The bottom category includes universities with only one of the nine measures ranked in the top 25. Within these groups, institutions are then sorted by how many times they rank between 26 and 50 on the nine performance variables, with ties listed alphabetically. A similar methodology produces a second set of institutions—those ranked 26 through 50 on the same nine measures.

For the purpose of this study, *The Center for Measuring University Performance* includes only those institutions that had at least \$40 million in federal research expenditures in fiscal year 2014. This is the same dollar cutoff used since the 2008 report. There were 160 institutions who met our criteria, 112 public and 48 private.

The first two tables list each institution with the most current data available for each measure and its corresponding national rank (i.e., rank among all institutions regardless of whether they are privately or publicly controlled). The third through sixth tables provide the same nine data measures but with the groupings determined by the control rank (i.e., rank among all private or all public institutions). Institutions ranking in the top 25 on at least one measure are included in the tables with the (1-25) identifier, while those ranking 26 through 50 are found in the tables labeled with the (26-50) header. Many research universities rank highly both nationally and among their public or private peers, and therefore appear in more than one table.

- **The Top American Research Universities (1-25)** identifies the 49 institutions (25 private, 24 public) that rank in the top 25 nationally on at least one of the nine measures.

- **The Top American Research Universities (26-50)** identifies the 27 institutions (8 private, 19 public) that rank 26 through 50 nationally on at least one of the nine measures.
- **The Top Private Research Universities (1-25)** identifies the 32 private institutions that rank in the top 25 among all private universities on at least one of the nine measures.
- **The Top Private Research Universities (26-50)** identifies the 6 private institutions that rank 26 through 50 among their private counterparts on at least one of the nine measures.
- **The Top Public Research Universities (1-25)** identifies the 41 public institutions that rank in the top 25 among all public universities on at least one of the nine measures.
- **The Top Public Research Universities (26-50)** identifies the 31 public institutions that rank 26 through 50 among their public counterparts on at least one of the nine measures.
- **The Top Medical and Specialized Research Universities** tables identify the institutions that have at least one measure that ranks in the top 50 nationally or among their private and public counterparts.

Data found in these tables may not always match the figures published by the original source. *The Center for Measuring University Performance* makes adjustments, when necessary, to ensure that the data reflect the activity at a single campus rather than that of a multiple-campus institution or state university system. When data are missing from the original source, *The Center for Measuring University Performance* may substitute another figure, if available. A full discussion of this subject, and the various adjustments or substitutions made to the original data, is in the Data Notes section of this report.

The Center for Measuring University Performance presents these tables, along with prior years' top universities, in Microsoft Excel spreadsheets on its website [<http://mup.asu.edu>].

Part II – The Center for Measuring University Performance – Research Universities

The Center for Measuring University Performance's research universities consist of academic institutions that had more than \$40 million in federal research expenditures in fiscal year 2014. In the following tables, institutions are listed alphabetically with the most current data available on each measure and their rank on each measure for each year. *The Center for Measuring University Performance* provides both the national rank (rank among all universities) and the control rank (rank within private or public universities). We include five years of data for each measure, which correspond to the same data years used in each of the five prior *The Top American Research Universities* reports. In addition to the nine performance variables presented in Part I tables, these tables also include other institutional characteristics related to student enrollment, medical schools, land grant status, ownership, research focus, and National Merit and Achievement Scholars. The Source Notes section of this report provides detailed information on each data element. Tables in this section include the following:

- **Total Research Expenditures** (2010-2014)
- **Federal Research Expenditures** (2010-2014)
- **Research by Major Discipline** (2014)
- **Endowment Assets** (2011-2015)
- **Annual Giving** (2011-2015)
- **National Academy Membership** (2011-2015)
- **Faculty Awards** (2011-2015)
- **Doctorates Awarded** (2011-2015)
- **Postdoctoral Appointees** (2010-2014)
- **SAT Scores** (2010-2014)
- **National Merit and Achievement Scholars** (2011-2015)
- **Change: Research** presents trend data on total, federal, and non-federal research (2005 and 2014) in constant dollars.
- **Change: Private Support and Doctorates** provides trend data on endowment assets (2006 and 2015) and annual giving (2006 and 2015) in constant dollars, and doctorates awarded (2006 and 2015).
- **Change: Students** includes trend data on median SAT scores (2005 and 2014), National Merit and Achievement Scholars (2006 and 2015), and student headcount enrollment (2005 and 2014).
- **Institutional Characteristics** includes state location, highest degree offered, medical school and land grant status, federal research focus (summary of federal research by discipline), and total student enrollment.
- **Student Characteristics** provides headcount enrollment data broken out by level (i.e., undergraduate and graduate), part-time enrollment by level, and degrees awarded.
- **The Center for Measuring University Performance** measures presents the number of times a university ranks in the top 25 (or 26-50) on the nine quality measures in this year's report as compared to the past five years (i.e., 2011-2016 reports).

Data found in these tables may not always match the figures published by the original source. *The Center for Measuring University Performance* makes adjustments, when necessary, to ensure that the data reflect the activity at a single campus rather than that of a multiple-campus institution or state university system. When data are missing from the original source, *The Center for Measuring University Performance* may substitute another figure, if available. A full discussion of this subject, and the various adjustments or substitutions made to the original data, is in the Data Notes section of this report.

The prior years' data or ranks may differ slightly from our last report due to revised figures or estimates from the data source or institution.

The Center for Measuring University Performance's website [<http://mup.asu.edu>] provides these same tables in Microsoft Excel spreadsheets for ease of analysis. In addition to the over-\$40-million group, the online tables contain data on all institutions reporting any federal research in the past five years.

Part III – The Top 200 Institutions

The following tables list the top 200 universities and colleges on each of the nine performance measures, along with National Merit and Achievement Scholars. (The Source Notes section provides detailed information on each of the 10 data elements.) Unlike the previous tables in Parts I and II, this section includes data for all academic institutions regardless of their federal research activity level.

The Center for Measuring University Performance provides each institution's rank nationally among all universities as well as its rank by institutional control (i.e., rank among private or public peers). In cases where several institutions tie for last place, we use a different cutoff point. For National Academy members, we list all institutions with at least one National Academy member among their faculty. Tables in this section include:

- **2014 Total Research Expenditures**
- **2014 Federal Research Expenditures**
- **2015 Endowment Assets**
- **2015 Annual Giving**
- **2015 National Academy Membership**
- **2015 Faculty Awards**
- **2015 Doctorates Awarded**
- **2014 Postdoctoral Appointees**
- **2014 SAT Scores**
- **2015 National Merit and Achievement Scholars**

Data found in these tables may not always match the figures published by the original source. *The Center for Measuring University Performance* makes adjustments, when necessary, to ensure that the data reflect the activity at a single campus rather than that of a multiple-campus institution or state university system. When data are missing from the original source, *The Center for Measuring University Performance* may substitute another figure if available. A full discussion of this subject, and the various adjustments or substitutions made to the original data, is in the Data Notes section of this report.

The Center for Measuring University Performance presents these tables, along with the prior years' top 200, as Microsoft Excel spreadsheets online at [<http://mup.asu.edu>].

Source Notes

Total Research Expenditures Federal Research Expenditures

Source: Higher Education Research and Development (HERD) Survey, FY 2014

Each year, the National Science Foundation (NSF) collects data from hundreds of academic institutions on expenditures for research and development in science and engineering fields and classifies them by source of funds (e.g., federal government, state and local government, industry, etc.). These data are the primary source of information on academic research and development (R&D) expenditures in the United States. Included in this survey are all activities specifically organized to produce research outcomes that are separately budgeted and accounted for. This “organized research” may be funded by an external agency or organization (“sponsored research”) or by a separately budgeted organizational unit within the institution (“university research”). This report excludes activities sponsored by external agencies that involve instruction, training (except training in research techniques, which is considered organized research), and health service, community service or extension service projects.

All Federally Funded Research Labs (FFRLs) are excluded from these academic expenditures data, including the following: Jet Propulsion Laboratory (California Institute of Technology); Los Alamos National Lab, Lawrence Livermore Lab, Lawrence Berkeley Lab (University of California); Software Engineering Institute (Carnegie Mellon); Argonne National Laboratory (University of Chicago); National Astronomy and Ionospheric Center (Cornell); Ames Laboratory (Iowa State University); Lincoln Laboratory (MIT); Plasma Physics Lab (Princeton); and SLAC National Accelerator Laboratory (Stanford). The NSF data no longer classify the Applied Physics Lab (APL) at Johns Hopkins as an FFRL, but federal funds support the vast majority of research conducted there. The APL makes up more than one-half of Johns Hopkins’ total federal R&D expenditures.

While inconsistencies in reporting (known and unknown) do exist here, as in any survey of this type, problems arise mostly when one breaks out the data by source of funds. NSF expects institutions to use year-end accounting records to complete this report, and there are nationally recognized accounting guidelines for higher education institutions. However, there are also countless variations in institutional policy that determine whether the university reports a particular expenditure as coming from one source or another, or possibly not counted at all. Take federal formula funds for agriculture (e.g., Hatch-McIntire, Smith-Lever) as an example. We conducted an informal survey of the appropriate institutions in the Association of American Universities (AAU) and found that two out of eleven land grants did not include any of these federal funds in their 1997 NSF data, while others included all or some of these monies. Because these funds make up a very small percentage of the total research expenditures in

any given year, the impact on our total research rankings is slight. The agriculture formula funds will have a somewhat greater, but still small, impact on the federal research rankings. NSF notes, “An increasing number of institutions have linkages with industry and foundations via subcontracts, thus complicating the identification of funding source. In addition, institutional policy may determine whether unrestricted state support is reported as state or as institutional funds.”¹

We believe that the reporting inconsistencies in the data are relatively minor when using the total research expenditures and the federal research expenditures component. Federal and state government audits of institutional accounting make deceptive practices highly unlikely, even though these entities do not audit the NSF data directly. NSF goes to great lengths to verify the accuracy of the data, especially federal expenditure data—checking them against several other federal agencies that collect the same or similar information. In fact, all major federal agencies and their subdivisions submit data to NSF identifying research obligations to universities each year. Historically, the NSF data have tracked very closely the data reported by universities. Further, for their National Patterns of R&D Resources series, NSF prefers to use the figures reported by the performers of the work (that is, academic institutions, industry, nonprofits) because they believe that the performers are in the best position to accurately report these expenditures.

In some sections of this report, these expenditure data are deflated to constant 1983 dollars to show real change over time. While NSF uses the Gross Domestic Price (GDP) implicit price deflator in its reports on federal trends in research, we use the Higher Education Price Index (HEPI) because of its narrower focus. Originally developed by Research Associates of Washington and currently managed by Commonfund Institute, the HEPI illustrates the effect of inflation on college and university operations.² In contrast, the GDP implicit price deflator is based on change in the entire U.S. economy and, as noted by NSF itself, “[its] use more accurately reflects an ‘opportunity cost’ criterion [i.e., the value of R&D in terms of the amount of other goods and services that could have been spent with the same amount of money], rather than a measure of cost changes of doing research.”³

Endowment Assets

Source: NACUBO-Commonfund Study of Endowment, endowment market value as of June 30, 2015.

Institutions report the market value of their endowment assets as of June 30 to three different sources, and they quite often use three different values. For this project, we use the NACUBO-Commonfund Study of Endowment because of NACUBO’s long history of reporting endowments of higher education institutions, their emphasis on using audited financial statements, and their

focus on net assets (i.e., includes returns on investments and excludes investment fees and other withdrawals). NACUBO conducts its study annually and reports the results each February in the *Chronicle of Higher Education*.

Another source for endowment assets is the Council for Aid to Education's (CAE) annual Voluntary Support of Education (VSE) survey, cosponsored by the Council for Advancement and Support of Education (CASE) and the National Association of Independent Schools. The VSE survey is useful as a secondary resource because it provides more single-campus data than the other two sources. For those institutions that report a system-wide total to NACUBO, we often use the VSE data to calculate a campus' percentage contribution to the entire system, applying that factor to the NACUBO figure. In other cases, we may substitute the VSE figure when the institution indicates that this is a good data source.

The National Center for Education Statistics (NCES) Integrated Postsecondary Education Data System (IPEDS) Finance Survey also collects information on endowment assets. IPEDS data are released later than other two sources and are used when NACUBO nor VSE figures are unavailable.

In our inaugural report of *The Top American Research Universities* in 2000, we noted the wide variation in the reporting of endowment market value between all three sources. An examination of the 1997 endowment figures showed only one university (University of North Carolina at Chapel Hill) had submitted the same figure to each of the three organizations. In a more recent study of major research universities, we found about one-third of the all institutions report identical figures but just seven universities in our over \$40 million federal research group. In the earlier study, we found that endowment assets reported to IPEDS tended to be lower than NACUBO or VSE data, but this is no longer true. In general, the greater the endowment the likelihood that the figures reported to the three sources will vary. Both studies found no consistent pattern to explain reporting variations among the institutions.

Annual Giving

Source: Council for Aid to Education's Voluntary Support of Education (VSE) Survey, FY 2015.

The Council for Aid to Education (CAE), formerly an independent subsidiary of RAND, has produced the Voluntary Support of Education (VSE) Survey since 1957. The annual giving data include all contributions actually received during the institution's fiscal year in the form of cash, securities, company products, and other property from alumni, non-alumni individuals, corporations, foundations, religious organizations, and other

groups. Not included in the totals are public funds, earnings on investments held by the institution, and unfulfilled pledges.

CAE's VSE Data Miner service, available online, provides 11 years of data for all participating institutions. Although this is a subscription-based service and requires a user ID and password, limited access is available online at [<http://www.cae.org/vse>].

National Academy Members

Source: National Academy of Sciences, National Academy of Engineering, and National Academy of Medicine membership directories for 2015.

One of the highest honors that academic faculty can receive is membership in the National Academy of Sciences (NAS), the National Academy of Engineering (NAE), or the National Academy of Medicine (NAM), formerly known as the Institute of Medicine. All three are private, nonprofit organizations and serve as advisors to the federal government on science, technology, and medicine. Nominated and voted on by active members, newly elected members of these organizations receive life terms. Individuals elected to membership come from all sectors—academia, industry, government, and not-for-profit agencies or organizations. Member election dates are in February (NAE), April (NAS), and October (NAM).

The data collected for these rankings use active or emeritus members at their affiliated work institution, as reported in the online membership directories. In all cases, we were able to determine the specific campus for individual members. We re-check institutional affiliation annually to account for established members who have changed employers or whose membership is no longer active.

Faculty Awards in the Arts, Humanities, Science, Engineering, and Health

Source: Directories or web-based listings for multiple agencies or organizations.

For this category, we collect data from several prominent grant and fellowship programs in the arts, humanities, science, engineering, and health fields. Included in this measure are:

- American Council of Learned Societies (ACLS) Fellows, 2014-15
- Beckman Young Investigators, 2015
- Burroughs Wellcome Fund Career Awards, 2015
- Cottrell Scholars, 2015
- Fulbright American Scholars, 2015-16
- Getty Scholars in Residence, 2015-16

- Guggenheim Fellows, 2015
- Howard Hughes Medical Institute Investigators, 2015
- Lasker Medical Research Awards, 2015
- MacArthur Foundation Fellows, 2015
- National Endowment for the Humanities (NEH) Fellows, 2016
- National Humanities Center Fellows, 2015-16
- National Institutes of Health (NIH) MERIT (R37), FY 2015
- National Medal of Science and National Medal of Technology, 2014
- NSF CAREER awards, 2015
- Newberry Library Long-term Fellows, 2015-16
- Pew Scholars in Biomedicine, 2015
- Presidential Early Career Awards for Scientists and Engineers (PECASE), 2014
- Robert Wood Johnson Policy Fellows, 2015-16
- Searle Scholars, 2015
- Sloan Research Fellows, 2015
- Woodrow Wilson Fellows, 2015-16

While the vast majority of these programs clearly identify a particular campus, in a few instances we used the institution's web-based phone directory to determine the correct campus.

Doctorates Awarded

Source: NCES IPEDS Completions Survey, doctoral degrees awarded between July 1, 2014, and June 30, 2015.

Each year, universities report their degrees awarded to the NCES in the IPEDS Completions Survey. IPEDS provides straightforward instructions for reporting doctoral degrees awarded, and we do not find any inconsistencies in reporting among the universities included in our rankings. IPEDS asks each institution to identify the number of Doctor of Education, Doctor of Juridical Science, Doctor of Public Health, and Doctor of Philosophy degrees awarded between July 1 and June 30.

Most institutions in our study submit degree data by campus or offer doctoral degrees solely or primarily at the main campus.

In addition to doctorate degrees, we present degrees awarded at other levels—associate's, bachelor's, master's, and professional degrees—in the Student Characteristics table.

Postdoctoral Appointees

Source: NSF/Division of Science Resource Statistics (SRS) Survey of Graduate Students and Postdoctorates in Science and Engineering, Fall 2014.

Each year, NSF and NIH collect data from all institutions offering graduate programs in any science, engineering, or health field. The Survey of Graduate Students and Postdoctorates in Science and Engineering (also called the Graduate Student Survey or GSS) reflects graduate enrollment and postdoctoral employment at the beginning of the academic year. Postdoctorates are defined in the GSS as “individuals with science and engineering PhD's, MD's, DDS's or DVM's and foreign degrees equivalent to U.S. doctorates who devote their primary effort to their own research training through research activities or study in the department under temporary appointments carrying no academic rank.” The definition excludes clinical fellows and those in medical residency training programs unless the primary purpose of their appointment is for research training under a senior mentor.

In the methodological notes for this survey,⁴ NSF indicates that it verifies the data with the institutional coordinator when dramatic year-to-year fluctuations are noted. In addition, in this data set, it is unclear whether an institution has actually reported zero postdocs or NSF has simply assigned a zero for non-response (rather than imputing by using prior-year or peer data, as described in NSF methodological notes). This year, in cases where we suspect it is not a true zero, we left the field blank.

Although each doctorate-granting campus submits data separately, NSF often aggregates them in its published reports. In all cases, we obtain the single-campus data for these schools directly from NSF.

SAT Scores

Source: NCES IPEDS Survey, SAT and ACT scores for Fall 2014.

IPEDS reports the 25th and 75th percentiles for verbal and quantitative SAT I scores for most institutions in our study. For our measure, we calculated the median of that range. Some institutions report the ACT instead of the SAT to IPEDS and some report both. We selected the test which has the greatest percentage of students reporting. To convert ACT scores, we use a conversion table provided by The College Board⁵ to generate a comparable SAT equivalent score. When an institution submits neither an SAT nor ACT score, we substitute data from other national data sources.

Other Measures of Undergraduate Quality

National Merit and Achievement Scholars

Source: The 2014-15 National Merit Scholarship Corporation Annual Report, which reflects the 2015 freshman class.

The National Merit Scholarship Corporation (NMSC) is an independent, nonprofit organization that awards scholarships to the nation's outstanding high school seniors based on their academic achievement, qualifying test scores, high school principal and counselor recommendations, and their activities, interests, and goals. The NMSC names approximately 15,000 National Merit Finalists each February. Of these, about 8,000 will receive a National Merit \$2,500 Scholarship, a corporate-sponsored scholarship, or a college-sponsored scholarship.

Until it was discontinued in 2015, National Achievement Scholars were selected and funded in a similar fashion and represented the nation's outstanding African-American students. Ideally, the National Hispanic Scholars Program should also be included in this category, but it does not track the enrollment of its scholarship winners. Should it do so in the future, we will include these students in our data. In this study, Merit and Achievement scholarships are credited to the main campus if the NMSC Annual Report does not indicate a branch campus.

While the number of National Merit and National Achievement award winners in the entering class provides an indication of the attractiveness of a university's undergraduate program to outstanding students, it is also an indicator that is sensitive to institutional policies on financial aid. Because the number of Merit Scholars is small, relatively small changes in institutional aid policies can have a significant impact on the number of National Merit Scholars enrolling in institutions. The average SAT score provides a broader-based and more reliable measure of overall undergraduate quality; for those reasons, we prefer the SAT scores to the number of National Merit and Achievement Scholars as an indicator of undergraduate quality.

Institutional Characteristics

Medical Schools

Source: NCES IPEDS Completions Survey, MD degrees awarded between July 1, 2014, and June 30, 2015.

Although the IPEDS Institutional Characteristics Survey does have a "medical" field that indicates whether an institution grants a medical degree, we choose not to use its data because it includes medical degrees in Veterinary Medicine, Dentistry, and other professional health-related fields. For our measure, we determined whether a particular campus awarded any MD degrees during the academic year. If the institution did not submit any data to IPEDS for that year, we then looked at whether it was accredited by the American Medical Association to determine whether the institution has a medical school.

Land Grant Institutions

Source: National Association of State Universities and Land Grant Colleges.

The first Morrill Act in 1862 appropriated federal funds for universities to provide agricultural and technical education to their citizens. A second Morrill Act in 1890 expanded eligibility to include several historically black colleges and universities, and in 1994 several Native American tribal colleges were recognized as land grant institutions. Today, there is at least one land grant institution in each state and U.S. territory and in the District of Columbia. Of the 105 institutions, most are public universities. Federal land grant institutions receive both federal and state dollars in support of their agricultural and extension activities.

While land grant status technically applies to some university systems, such as the University of California and the University of Nebraska, for our study we designate as land grant institutions only those schools that actually perform that function (e.g., UC-Berkeley, UC-Davis, UC-Riverside, Nebraska-Lincoln). In these cases, the land grant field will identify whether an institution is part of a system-wide land grant and whether the vast majority of the activity occurs on that campus. For example, UC-Davis is coded as "Yes-System" while UCLA is coded as "No-System." We consider the 1890 institutions as land grant institutions, but we identify them separately because they do not perform extension activities.

Research Focus

NSF/SRS Survey of R&D Expenditures at Universities and Colleges, FY 2014.

In addition to reporting expenditure data by source of funds, NSF identifies in what major disciplines the money is expended. In the Research by Discipline table we provide the proportion of total and federal expenditures in each discipline for those institutions with more than \$40 million in federal research. These data are useful for developing groups of similar institutions for peer analysis.

The Institutional Characteristics table provides a summary measure of an institution's research strength and concentration based on these discipline-level expenditures. Universities with 95-100% of their federal research dollars spent in one particular discipline are coded as "all." We identify institutions with 75-94% in one area as "heavy" and label those with 50-74% of their expenditures concentrated as "strong." Other universities with 25-49% in one or more disciplines we describe as "moderate." A few institutions (but none in the more than \$40 million group) have expenditures distributed fairly evenly across the disciplines; those we code as "mixed."

In some cases, where an institution reports as a multi-campus entity, we made adjustments to break out the discipline-level expenditure data by single campus. Typically, this involved moving all or a portion of the life sciences expenditures to the health or medical center campus. IPEDS fall enrollment and graduate degrees by discipline data also were used to help in this effort.

While these data offer some insight as to the research structure of a university, their usefulness is limited. For example, we may be tempted to use the life sciences as a surrogate for medical research, but we must remember that they also include agricultural and biological sciences. Further, the growing trend toward multidisciplinary and interdisciplinary projects may make it more difficult for universities to accurately reflect expenditures by discipline or sub-discipline. We choose not to break out these sub-disciplines because the data are increasingly prone to error as further adjustments are made.

Student Characteristics

Fall Enrollment

Source: NCES IPEDS Fall Enrollment Survey, 2014.

Each November, institutions report their current fall headcount enrollment to the IPEDS Fall Enrollment Survey. Enrollment figures include both degree seeking and non-degree seeking students. We provide the headcount enrollment by level as presented by IPEDS, along with the percentage of those attending part-time. Graduate students include those seeking specialist degrees in engineering and education. First professional students include those seeking degrees in medical fields, such as Chiropractic, Dentistry, Medicine, Optometry, Osteopathic Medicine, Pharmacy, Podiatry, and Veterinary Medicine, as well as those seeking degrees in Law and Theology.

Each campus in our study submits enrollment data by campus, except for the few institutions identified in our Data Notes section. Because this is an informational item and not one of our nine quality measures, we did not attempt to adjust these figures.

Federal Research with and without Medical School Research

AAMC Federal Research

Source: Association of American Medical Colleges

The Association of American Medical Colleges collects data on federally sponsored research at medical colleges through on the Liaison Committee on Medical Education (LCME) Part I-A, Annual Financial Questionnaire. We calculate each medical school's federal R&D by summing the recorded dollars and a portion of the relative administrative costs. We exclude the not-recorded dollars.

Data Notes

The raw data used for *The Top American Research Universities* project—obtained from federal agencies and national organizations—often contain information on single-campus institutions, multiple-campus institutions, and state university systems, without clearly identifying the distinctions. This makes national comparisons difficult and unreliable.

To increase the validity and usefulness of these data, we adjusted the original reported figures, when necessary, to ensure that all data represent the strength of a single-campus institution. MUP bases its adjustments on information gathered from the reporting agency or from the university itself. In cases where the published data represent a single campus, we do not adjust the data. When the data represent more than one campus, we first attempt to obtain a figure directly from the National Science Foundation (NSF) (for research expenditures and post-doctorates), from the institution itself, or from the university system office that submitted the data. If unavailable from those primary sources, we use an estimated or substitute figure derived from information found on the institution's website.

If the institution provides an estimate representing at least 97% of the originally published figure, we credit the full amount to the main campus. Otherwise, we use the estimate provided by the institution.

MUP does not adjust the private university data because of multi-campus or system-wide reporting. We treat all private universities in this study as single-campus institutions because, while some may have multiple campuses, they are generally in or around a single city and considered an integral part of the main campus. Furthermore, private institutions generally do not break out their data by regional, branch, or affiliated campus as often happens with public institutions.

The following tables outline the various adjustments or substitutions that we made to the original data. The tables list institutions alphabetically and include both private and public universities. For the purpose of this report, we provide notes for institutions with more than \$40 million in fiscal year 2014 federal research.

Data Notes for Universities with Over \$40 Million in Federal Research

University / Statistics	Original Data (dollars in thousands)	MUP Data (dollars in thousands)	Comments
Arizona State University			
2015 Doctorates		687	Combined IPEDS reported data.
Auburn University			
2015 Endowment	641,993	641,993	Estimate at least 97% is main campus.
2015 Giving	106,353	106,353	Estimate at least 97% is main campus.
Augusta University			
2014 Postdocs	188	188	Reported under Georgia Regents University
Baylor College of Medicine			
2015 Giving	Not Reported	61,656	Substituted IPEDS.
Carnegie Mellon University			
2014 Endowment	1,599,990	1,599,900	Revised 2014 NACUBO data.
Cleveland State University			
2015 Endowment	Not Reported	74,900	Substituted 2015 VSE.
Cold Spring Harbor Laboratory			
2015 Endowment	Not Reported		Did not report to NACUBO nor VSE in 2015.
2015 Giving	Not Reported		No substitute data available.
Colorado State University - Fort Collins			
2015 Giving	Not Reported	41,342	Substituted IPEDS.
Cornell University			
2014 Federal R&D	438,834	299,320	Estimate 68.2% based on university documents.
2014 Total R&D	874,727	580,936	Estimate 66.4% based on university documents.
2015 Endowment	6,037,546	4,760,560	Substituted IPEDS.
2015 Giving	590,641	434,465	Estimate 73.6% based on 2015 IPEDS.
Harvard University			
2014 Endowment	35,883,691	35,883,891	Revised 2014 NACUBO data.
Icahn School of Medicine at Mount Sinai			
2015 Endowment	Not Reported	717,372	Substituted IPEDS. Did not report to NACUBO nor VSE in 2015.
2015 Giving	Not Reported	109,733	Substituted IPEDS.
Indiana University - Bloomington			
2015 Endowment	1,974,215	960,625	Substituted IPEDS.
2015 Giving	359,319	211,471	Estimate based on IPEDS and university documents.
Indiana University - Purdue University - Indianapolis			
2015 Endowment	1,974,215	825,184	Substituted IPEDS.
2015 Giving	359,319	121,989	Estimate based on IPEDS and university documents.

Data Notes for Universities with Over \$40 Million in Federal Research

University / Statistics	Original Data (dollars in thousands)	MUP Data (dollars in thousands)	Comments
Kansas State University			
2014 SAT	Not Reported		Does not require SAT/ACT.
Louisiana State University - Baton Rouge			
2015 Endowment	851,833	427,852	Substituted 2015 VSE.
Medical College of Wisconsin			
2015 Giving	Not Reported	20,907	Substituted IPEDS.
Michigan State University			
2015 Endowment		2,673,652	Combined university and foundation.
Montana State University - Bozeman			
2015 Giving	Not Reported	13,299	Substituted IPEDS.
Naval Postgraduate School			
2015 Giving	Not Reported		No substitute data available.
New Mexico State University - Las Cruces			
2015 Endowment	221,005	221,005	Estimate at least 97% is main campus.
New York University			
2014 Endowment	3,424,000	3,422,227	Revised 2014 NACUBO data.
2015 Doctorates		438	Includes NYU and former Polytechnic Institute of NYU.
Ohio State University - Columbus			
2015 Endowment	3,633,887	3,633,887	Estimate at least 97% is main campus.
2015 Giving	359,798	359,798	Estimate at least 97% is main campus.
Pennsylvania State University - Hershey Medical Center			
2014 Federal R&D	516,300	54,404	Estimate 10.5% based on university documents.
2014 Postdocs	456	91	Estimate 20% based on university documents.
2014 Total R&D	785,705	82,793	Estimate 10.5% based on university documents.
2015 Endowment	3,635,730	436,288	Substituted data from published documents.
2015 Giving	194,572	35,023	Estimate 18% based on university documents.
Pennsylvania State University - University Park			
2014 Federal R&D	516,300	461,896	Estimate 89.5% based on university documents.
2014 Postdocs	456	365	Estimate 80% based on university documents.
2014 Total R&D	785,705	702,912	Estimate 89.5% based on university documents.
2015 Endowment	3,635,730	1,854,222	Substituted data from published documents.
2015 Giving	194,572	155,658	Estimate 80% based on university documents.
Purdue University - West Lafayette			
2015 Endowment	2,397,902	2,397,902	Estimate at least 97% is main campus.
2015 Giving	172,219	172,219	Estimate at least 97% is main campus.

University of Michigan - Ann Arbor			
2015 Endowment	9,952,113	9,952,113	Estimate at least 97% is main campus.
2015 Giving	394,310	394,310	Estimate at least 97% is main campus.
University of Minnesota - Twin Cities			
2014 Endowment	3,164,792	3,176,456	Revised 2014 NACUBO data.
2015 Endowment	3,297,460	3,297,460	Estimate at least 97% is main campus.
2015 Giving	357,861	344,303	Estimate based on IPEDS and university documents.
University of Missouri - Columbia			
2015 Endowment	1,476,959	857,471	Substituted 2015 VSE.
University of Nebraska - Lincoln			
2015 Endowment	1,538,071	906,156	Substituted IPEDS.
2015 Giving	266,375	177,321	Estimate 66.6% based on 2014 IPEDS.
University of Nebraska Medical Center			
2015 Endowment	1,538,071	226,077	Substituted IPEDS.
2015 Giving	266,375	89,054	Estimate 33.4% based on 2014 IPEDS.
University of New Hampshire - Durham			
2015 Endowment	676,268	346,926	Substituted IPEDS.
2015 Giving	Not Reported	9,605	Substituted IPEDS.
University of New Mexico - Albuquerque			
2014 Endowment	422,934	412,772	Revised 2014 NACUBO data.
University of North Dakota			
2014 Endowment	198,476	226,800	Revised 2014 NACUBO data.
2015 Giving	Not Reported	9,284	Substituted IPEDS.

Data Notes for Universities with Over \$40 Million in Federal Research

University / Statistics	Original Data (dollars in thousands)	MUP Data (dollars in thousands)	Comments
University of Oklahoma - Norman			
2014 Federal R&D	108,356	53,223	Estimate 49.1% based on university documents.
2014 Total R&D	227,104	120,322	Estimate 53% based on university documents.
2015 Endowment	1,523,024	1,066,117	Estimate 70% based on published documents.
2015 Giving	317,347	252,475	Estimate 79.6% based on 2014 IPEDS.
University of Oklahoma Health Sciences Center			
2014 Federal R&D	108,356	55,133	Estimate 50.9% based on university documents.
2014 Total R&D	227,104	106,782	Estimate 47% based on university documents.
2015 Endowment	1,523,024	456,907	Estimate 30% based on published documents.
2015 Giving	317,347	64,872	Estimate 20.4% based on 2014 IPEDS.
University of Rhode Island			
2014 Endowment	118,850	132,234	Revised 2014 NACUBO data.
University of Rochester			
2014 SAT	Not Reported		Did not report SAT/ACT.
University of Tennessee - Knoxville			
2015 Endowment	1,106,924	608,873	Substituted 2015 VSE.
University of Tennessee Health Science Center			
2015 Endowment	Not Reported		Did not report to NACUBO nor VSE in 2015.
University of Texas - Austin			
2015 Endowment	24,083,150	10,507,795	Substituted 2015 VSE.
University of Texas Health Science Center - Houston			
2015 Endowment	24,083,150	306,094	Substituted 2015 VSE.
University of Texas Health Science Center - San Antonio			
2015 Endowment	24,083,150	476,632	Substituted 2015 VSE.
University of Texas MD Anderson Cancer Center			
2015 Endowment	24,083,150	1,200,742	Substituted 2015 VSE.
University of Texas Medical Branch - Galveston			
2015 Endowment	24,083,150	531,562	Substituted 2015 VSE.
University of Texas SW Medical Center - Dallas			
2015 Endowment	24,083,150	1,620,501	Substituted 2015 VSE.
University of Vermont			
2015 Endowment	Not Reported	453,653	Substituted 2015 VSE.
University of Washington - Seattle			
2015 Endowment	3,076,226	3,076,226	Estimate at least 97% is main campus.
2015 Giving	447,021	447,021	Estimate at least 97% is main campus.

Data Notes for Universities with Over \$40 Million in Federal Research

University / Statistics	Original Data (dollars in thousands)	MUP Data (dollars in thousands)	Comments
University of Wisconsin - Madison			
2015 Endowment	2,465,051	2,792,622	Substituted 2015 VSE.
Wake Forest University			
2014 SAT	Not Reported		Does not require SAT/ACT.
Washington State University - Pullman			
2015 Endowment	885,777	885,777	Estimate at least 97% is main campus.
2015 Giving	106,370	106,370	Estimate at least 97% is main campus.
Weill Cornell Medical College			
2014 Federal R&D	438,834	139,514	Estimate 31.8% based on university documents.
2014 Total R&D	874,727	293,791	Estimate 33.6% based on university documents.
2015 Endowment	6,037,546	1,276,986	Substituted IPEDS.
2015 Giving	590,641	156,176	Estimate 26.4% based on 2015 IPEDS.
Woods Hole Oceanographic Institution			
2015 Endowment	Not Reported		Did not report to NACUBO nor VSE in 2015.
2015 Giving	Not Reported		No substitute data available.
Yale University			
2014 Endowment	23,900,000	23,894,800	Revised 2014 NACUBO data.
Yeshiva University			
2014 Endowment	1,093,136	1,094,558	Revised 2014 NACUBO data.
Yeshiva University			
2014 Endowment	1,093,136	1,094,558	Revised 2014 NACUBO data.

The Center for Measuring University Performance Publications

The Top American Research Universities. (MUP Center Reports, 2000-2015). [<http://mup.asu.edu/publications>]

What's in a Name? The Classification of Research Universities, 2015.

Tracking Academic Research Funding: The Competitive Context for the Last Ten Years, 2014.

The Best American Research Universities Ranking: Four Perspectives, 2013.

Measuring Research Performance: National and International Perspectives, 2012.

Moving Up: The Marketplace for Federal Research in America, 2011.

In Pursuit of Number One, 2010.

Research University Competition and Financial Challenges, 2009.

Competition and Restructuring the American Research University, 2008.

Rankings, Competition, and the Evolving American University, 2007.

Deconstructing University Rankings: Medicine and Engineering, and Single Campus Research Competitiveness, 2005.

Measuring and Improving Research Universities: TheCenter at Five Years, 2004.

The Sports Imperative in America's Research Universities, 2003.

University Organization, Governance, and Competitiveness, 2002.

Quality Engines: The Competitive Context for Research Universities, 2001.

The Myth of Number One: Indicators of Research University Performance, 2000.

Improving student success using technology-based analytics. *Diversity & Democracy*, Volume 17, Number 1 (2014) by Elizabeth D. Capaldi. [<http://aacu.org/diversitydemocracy/2014/winter/phillips>]

Rainer and Julie Martens Invited Lecture: Research Universities—the Next Five Years, *Kinesiology Review*, Volume 3, Issue 1 (2014), 4-12 by John V. Lombardi. [<http://journals.humankinetics.com/kr-back-issues/kr-volume-3-issue-1-february>]

Leading the University: The Roles of Trustees, Presidents, and Faculty, *Change*, 45:1 (2013), 24-32 by Richard Legon, John V. Lombardi, and Gary Rhoades. [<http://www.changemag.org/Archives/Back%20Issues/2013/January-February%202013/leading-the-university-abstract.html>]

Improving Advising Using Technology and Data Analytics, *Change*, 45:1 (2013), 48-55 by Elizabeth D. Phillips. [[http://www.changemag.org/Archives/Back Issues/2013/January-February 2013/improving-advising-full.html](http://www.changemag.org/Archives/Back%20Issues/2013/January-February2013/improving-advising-full.html)]

How Universities Work, Baltimore: Johns Hopkins (2013) by John V. Lombardi.

Performance and Costs in Higher Education: A Proposal for Better Data. *Change*, April, 23, 8-15 (2011) by Elizabeth D. Capaldi and Craig. W. Abbey. [<http://www.changemag.org/Archives/Back%20Issues/2011/March-April%202011/better-data-full.html>]

Intellectual Transformation and Budgetary Savings through Academic Reorganization. *Change*, July/August, 19-27. (2009) by Elizabeth D. Capaldi. [<http://www.changemag.org/Archives/Back%20Issues/July-August%202009/full-intellectual-budgetary.html>]

Improving Graduation Rates: A Simple Method That Works, *Change*, 38:4 (2006), 44-58 by Elizabeth D. Capaldi, John Lombardi, and Victor Yellen. [http://jvlon.com/A%20Simple%20Method_Change2006.pdf]

Using National Data in University Rankings and Comparisons (*TheCenter Reports*, June 2003) by Denise S.Gater. [<http://mup.asu.edu/gaternatdata.pdf>]

A Review of Measures Used in U.S. News & World Report's "America's Best Colleges" (*TheCenter Occasional Paper*) by Denise S. Gater. [<http://mup.asu.edu/Gater0702.pdf>]

TheCenter Top American Research Universities: An Overview (*TheCenter Reports*, 2002) by Diane D. Craig. [<http://mup.asu.edu/TARUChina.pdf>]

The Competition for Top Undergraduates by America's Colleges and Universities (*TheCenter Reports*, 2001) by Denise S. Gater. [<http://mup.asu.edu/gaterUG1.pdf>]

The Use of IPEDS/AAUP Faculty Data in Institutional Peer Comparisons (*TheCenter Reports*, 2001) by Denise S. Gater and John V. Lombardi [<http://mup.asu.edu/gaterFaculty1.pdf>]

Toward Determining Societal Value Added Criteria for Research and Comprehensive Universities (*TheCenter Reports*, 2001) by Roger Kaufman. [<http://mup.asu.edu/kaufman1.pdf>]

U.S. News & World Report's Methodology (*TheCenter Reports*, 2001, Revised) by Denise S. Gater. [<http://mup.asu.edu/usnews.html>]

A Decade of Performance at the University of Florida (1990-1999) (University of Florida, 1999) by John V. Lombardi and Elizabeth D. Capaldi [<http://mup.asu.edu/10yrPerformance.html>]

The Center for Measuring University Performance Advisory Board

Chaouki T. Abdallah

Interim President
University of New Mexico

Arthur M. Cohen

Professor Emeritus
Division of Higher Education
Graduate School of Education and Information Studies
University of California, Los Angeles

Larry Goldstein

President, Campus Strategies, LLC

Gerardo M. Gonzalez

Dean Emeritus
Professor, Educational Leadership and Policy Studies
School of Education
Indiana University

Roger Kaufman

Professor Emeritus, Educational Psychology and Learning
Florida State University
Director, Roger Kaufman & Associates
Distinguished Research Professor
Sonora Institute of Technology

Richard H. Stanley

Senior Vice President and University Planner
Arizona State University

The Center for Measuring University Performance Staff

John V. Lombardi

MUP Director
Professor of History, University of Massachusetts Amherst
President Emeritus, University of Florida

Elizabeth D. Capaldi Phillips (d. 2017)

MUP Director
Provost Emerita, University Professor
Arizona State University

Craig W. Abbey

Research Director, MUP Center
Associate Vice Provost and
Director of Institutional Research
University at Buffalo

Diane D. Craig

Research Associate, MUP Center
University of Florida

Lynne N. Collis

Administrative Services, MUP Center
