INTRODUCTION

This 19th edition of *The Top American Research Universities* reflects a consistent and continuing view of the remarkable commitment of American universities to an academic research mission. Over the years, within the constantly changing circumstances for American higher education, the research mission of these institutions has remained a key element in defining the competitive context within which American universities operate. This competition is reflected in many ways, especially in the recruitment, retention, and graduation of students and the acquisition of high quality faculty and staff. Our work has focused on the elements that define the top research universities within this competitive context, relying on data that is public and reasonably verifiable.

The consistency of our approach to measuring research university performance since 2000 has allowed us to observe the impact of the changing economic circumstances surrounding American higher education on the research mission of these institutions. As is our tradition, each year we offer an introductory essay that focuses on some aspect of the context of American research university competition. Among the many elements that define this competition, nothing is more important than money. Although the rhetoric of our profession speaks of resources, the critical dimensions of research university success depend on the financial resources available to each institution that can be invested in the acquisition of faculty, staff, and students of the highest quality.

Of particular interest in this conversation about university competition is a recognition that the changing economic circumstances of higher education has increased the differentiation in the research performance of institutions. The group of universities at the top level of competition have a much higher level of resources available to invest in their research mission than do other institutions. These resources allow high performing institutions to not only sustain quality undergraduate and graduate instructional programs and provide a wide range of services to their students, staff, local and state communities, and the nation, but also invest in the special facilities and support required to sustain large scale aggregate research accomplishments.

Along with many other observers, we have seen that over time the distance that separates the top level of research institutional resources from those of other institutions continues to be significant and growing and that while a few institutions do manage to move into the top levels of

research performance, major additional resources are required to achieve this goal. Massive fund raising campaigns are but one symptom of the drive to acquire the money necessary to buy the competitive elements needed to stay within or within reach of the top levels of research performance. The essay that accompanies this edition of *The Top American Research Universities* highlights the large scale financial resources available to the top ten public and top ten private research universities that allow them to compete for the federal research funding that is the major component of external support for American university research.

The stable and reliable indicators contained in this report, along with the data available to the public on the Center for Measuring University Performance website (<https://mup.umass.edu>) allow universities to review their own placement within the context of the institutions included in this year's report and to construct alternative ways of measuring that performance. As is our custom, this year's report explains any adjustments we have made to the data to reflect changes in reporting agencies policies and practices and changes in institutional organization and structure.

We generally mail about 1500 copies of *The Top American Research Universities* to university leadership, libraries, and others interested in this topic. In addition, each year we receive about 300 hits per day on the website. Our staff responds to a significant number of queries from institutional research officers and others interested in the topic of research university competition and performance. Our staff also participates in a variety of academic meetings related to university performance and competition. As always, we rely on the advice, expertise, and experience of our Advisory Board.

We have been able to pursue this project consistently over the years thanks to the continuing commitment of our sponsoring institutions and the creative engagement of their academic and administrative staff, currently the University of Massachusetts Amherst and the University of Florida, and in the past including Arizona State University, as well as the support of the institutions where our staff is resident, the University at Buffalo, the University of Florida, and UMass Amherst.

Staying at the Top: An Essay on the Comparative Advantage of America's Top Research Universities

John V. Lombardi and Diane D. Craig

Abstract: The complex system of American university education defies easy characterization, but the predominance of the top academic research institutions remains a stable element within a changing national higher education marketplace. The key requirement for success within this marketplace is the acquisition of talent and the ability to support this research talent with equipment, facilities, and personnel. A review of some indicators demonstrates that success in the university research competition requires sustained high levels of revenue available for investment in the elements of research performance. The difficulty of achieving this level of revenue is demonstrated by the remarkable ability of the top performers to maintain their position in the competition, and difficulty other institutions have in challenging this dominance.

While the national conversation about higher education swirls around controversial topics of all kinds, giving the impression of an industry in crisis, the overall operation of this industry remains reasonably stable. Change of course does occur, but much of it reflects the continued significance of a college education for large number of individuals, the constantly documented lifetime earnings advantage of a college education, and the significant demand for educational services from individuals older than 25, many of whom engage higher education online. Enrollment in traditional non-profit four-year institutions has risen steadily over the years and today stands at about 16 million undergraduate students with the best projections indicating a relatively stable number with perhaps some small growth over the next five years or so.

General Characteristics of the University Marketplace

It is useful in interpreting generalizations about college enrollment to recognize some characteristics of the distribution of both institutions and students as summarized below.

Institutionsⁱ

Of the 2,340 four-year non-profit institutions, 32% are public and 68% are private.
Among the 750 public institutions, 81% have enrollments of 2,500 or more students and 10% have enrollments over 30,000.
Among the 1,589 private institutionsⁱⁱ, 25% have enrollments of 2,500 or more students and 1% have enrollments over 30,000.

Students

Of the almost 16 million undergraduate students enrolled in 4-year non-profit institutions, just over 80% are enrolled in public institutions and just under 18% are in private institutions (Table 1). However, the nearly three million post-baccalaureate students in these institutions are divided much more evenly with about 53% in public institutions and 47% in private institutions.

Table 1. 2017 Fall Enrollment at Four-Year Institutions

Institutional Control	Under-graduate	% of Total	Post-baccalaureate	% of Total
Public	13,100,953	82%	1,459,202	53%
Private	2,817,017	18%	1,289,460	47%
Total	15,917,970		2,748,662	

Source: Digest of Education Statistics, 2018, tables 303.70 and 303.80.

The Research University Marketplace

Of particular interest in this context are those universities NCES classifies into two groups based on the Carnegie Classification®, those with very high research and those with high research (Table 2). This is a group that coincides in many ways with those we identify at the Center for Measuring University Performance (MUP) as Top Research Universities, or those with an annual federal research expenditure of \$40 million or more. Of the 219 institutions in these two NCES categories in Fall 2017, 120 (55%) have 20,000 students or more, and 64 (29%) have 30,000 or more. Public institutions make up 71% of the universities classified by NCES as having high or very high research performance. In terms of enrollment, the high to very high research universities have 5.2 million students, with the public institutions in these categories enrolling just over 4 million, or about 81%.

Table 2. Institutions with Very High or High Research Activity and Fall 2017 Enrollment

Institutional Control and Research Activity	No. of Institutions	Less than 20,000 students	20,000 to 29,999 students	30,000 or more students	Total Students
Public	155	50	47	58	4,211,036
Very High	81	4	26	51	2,844,803
High	74	46	21	7	1,366,233
Private	64	49	9	6	959,608
Very high	34	22	7	5	633,342
High	30	27	2	1	326,266
All Institutions	219	99	56	64	5,170,644
Very High	115	26	33	56	3,478,145
High	104	73	23	8	1,692,499

Source: Digest of Education Statistics, 2018, table 317.40.

In short, these institutions differ significantly by size and type, with public institutions serving the largest number of students although, overall, there are more private institutions than public institutions. It is not easy to generalize about students and institutions when the range of institutional size and their public or private character are significantly different.

Although much has been written about a possible crisis reflected in institutional failures, the number of four-year, not-for-profit colleges that have closed over the last seventeen years averages about five per year, and the most recent seven years saw the average number of closures at about the same rate, although there was a jump to 12 in 2016-17. For those institutions, their few remaining students, faculty, staff and their alumni and friends, these closures can be traumatic, but as a statistical measure of the industry's health, these institutions represent only a tiny fraction of four-year colleges and an even smaller fraction of total enrollment.

Table 3. Degree-granting Institution Closings

Academic Year	4-year Public	4-year Private
2010-11	0	6
2011-12	0	2
2012-13	1	2
2013-14	1	3
2014-15	0	3
2015-16	0	5
2016-17	0	12

Source: Digest of Education Statistics, 2018, tables 317.50.

Many observers also worry about the decline in the percentage of tenure-track full-time faculty at these four-year and above institutions. In the period between 1993-94 and 2017-18, the percentage of public 4-year doctoral institutions with tenure systems declined less than one percent from 100%, while public masters' institutions declined from 98% to 97% (Table 4). However, their private counterparts saw much greater declines, from 91% to 80% among doctoral institutions and from 77% to 59% among masters' institutions. Clearly the public institutions have held onto tenure systems more successfully than their private counterparts.

Table 4. Percentage of Four-year Institutions with a Tenure System, AY 1994-2018

Academic Year	Total Public Institutions	Public Doctoral Institution	Public Master's Institution	Total Private Institutions	Private Doctoral Institution	Private Master's Institution
1993-94	93%	100%	98%	66%	91%	77%
2003-04	91%	100%	98%	61%	87%	72%
2013-14	96%	100%	98%	62%	80%	63%
2017-18	95%	100%	97%	61%	80%	59%

Source: Digest of Education Statistics, 2018, table 316.80

Within those institutions with tenure systems, since 1993-94 the percentage of full-time faculty with tenure in doctoral public institutions has steadily declined from 55% to 42% in 2017-18, and by nearly three percentage points in just the past four years (Table 5). In contrast, among masters' public institutions, the proportion of tenured faculty has fluctuated over the past two and a half decades. There was a large decline between 1993-94 (61%) and 2003-04 (53%) but began to rebound in mid-2000s and peaked in 2013-14 at 55% before declining to a record low in 2017-18 of 53%. In the private institutions with tenure systems, during this same period, the percentages of full-time faculty with tenure declined from about 48% to 38% percent at doctoral institutions, with slower decline in recent years as compared to their public counterparts. Tenured faculty rates have remained relatively stable at private masters' institutions since 1993-94 (range of 49-52%).

Table 5. Percentage of Full-time Faculty with Tenure at Four-year Institutions with a Tenure System, AY 1994-2018

Academic Year	Total Public Institutions	Public Doctoral Institution	Public Master's Institution	Total Private Institutions	Private Doctoral Institution	Private Master's Institution
1993-94	56%	55%	61%	50%	48%	52%
2003-04	50%	49%	53%	45%	40%	49%
2013-14	47%	45%	55%	44%	40%	52%
2017-18	45%	42%	53%	42%	38%	51%

Source: Digest of Education Statistics, 2018, table 316.80

However, these numbers depend significantly on the composition of faculty. Among full-time instructional faculty in 2016-17, 89% of those with the rank of Professor and 76% with the rank of Associate Professor have tenure at public doctoral institutions (Table 6). Among doctoral institutions in the private not-for-profit sector, 85% of the Professors and 63% of the Associate Professors have tenure. Among masters' institutions, both public and private universities have high levels of tenure among Professor ranks (98% for publics; 93% for privates) and Associate Professor (90% and 78%, respectively). The slightly higher percentage of tenure at masters' institutions, both public and private, and at all ranks, may reflect less emphasis on research productivity than at the doctoral institutions, although given the wide range of institutional characteristics among these institutions this can only be a guess without a more detailed study.

Table 6. Percentage of Full-time Faculty with Tenure at Four-year Institutions by Rank, AY 2017

Faculty Rank	Total Public Institutions	Public Doctoral Institution	Public Master's Institution	Total Private Institutions	Private Doctoral Institution	Private Masters' Institution
Professor	91%	89%	98%	88%	85%	93%
Asso Professor	79%	76%	90%	69%	63%	78%
Ast Professor	4%	1%	8%	3%	2%	5%
Instructor	10%	1%	2%	0%	0%	0%

Source: Digest of Education Statistics, 2018, table 316.80

Tenure is clearly still a major element of faculty work and careers at these institutions but with significant variations by institutional type, and probably by research intensity. It is likely that the existence of strong union presence at many public institutions may well have helped sustain the tenure systems at higher levels at these universities, although the research intensity of the institutions is also likely to have a significant influence on the prevalence of tenure as most research competitive faculty seek positions on the tenure-track. Also, as these data only apply to full-time instructional faculty, they do not account for the prevalence of contingent teaching faculty or research staff on various forms of term contracts who are usually not part of the tenure system.

The Top American Research Universities: Scale of Operations

These general characteristics of the higher education institutional marketplace prompted a review of the enrollment characteristics of the MUP's top research institutions. At a glance, enrollment at these highly competitive research universities has grown over the years, with a 7% increase in total undergraduate enrollment and a 4% increase in total graduate enrollment between 2012 and 2016. This leads to a possible competitive advantage to scale in the effort to acquire the top faculty, staff, and students that translate into sustained success in research funding. Moreover, these institutions all have outstanding brand identification reflected in the high selectivity they exhibit in their undergraduate application processes. Scale is important, as the difficulty of sustaining top research performance continues to increase with constantly expanding requirements for enhanced equipment, facilities, support personnel, and administrative services to manage the complex and highly regulated research environment.

Institutions grow in other ways too, as they develop ever-expanding commercial initiatives based on their research productivity and enhance the services they provide students, faculty, staff, and their surrounding communities. A reasonably high level of participation by students is an advantage as their substantially discounted tuition and fees nonetheless contribute a significant portion to institutional revenue. Moreover, in public institutions, larger student populations often translate into increased state support, and in all institutions, larger student bodies in the long run produce larger alumni groups that, in turn, eventually generate larger annual giving and endowments.

Some indicators of enrollment growth within the domain of our top research universities illustrate this perspective, recognizing from the review of general enrollment indicators above, that the changes in enrollment while significant for individual institutions in different circumstances, are overall, rather modest. This illustration shows enrollment in terms of the competitive group of top research universities, defined here by the MUP project as those with at least \$40 million in annual federal research expenditures. Excluding standalone medical schools and specialized institutions, there are 129 institutions (public and private) that meet this criterion. In addition, within this group, public and private institutions belong to two smaller groups: the top 10 public and the top 10 private institutions ranked by their annual federal research expenditures, that allow a perspective on the characteristics of the most research competitive institutions compared to the performance of the rest of the high performing public and private research universities.

Between 2010 and 2016 the mean undergraduate enrollment for the top 10 public research institutions has grown by a little over 2%. The rest of the public research universities saw about the same enrollment growth of about 3%. In the case of the private research universities in our group, the top 10 grew their average undergraduate enrollment by 10% with the average of the rest of the private research institutions growing at about 11%. However, the size of the undergraduate populations of these institutions diverge substantially by their public and private status. The top 10 public institutions in 2016 had an average undergraduate student body of 24,739 while the rest of the public research universities had an average undergraduate student body of 24,670. The top 10 private institutions had an average of 8,579 undergraduates while the rest of the private universities had 8,379 headcount enrollment.

Table 7. Mean Undergraduate Headcount Enrollment, 2010-2016

Institutions with over \$40M Federal Research	2010	2011	2012	2013	2014	2015	2016	2010-16 Net Change	2010-16 Percent Change
Top 10 Publics	25,923	26,113	26,349	26,732	27,089	27,382	27,924	2,001	8%
Rest of Publics (N=81)	21,948	22,307	22,567	22,916	23,335	23,799	24,346	2,397	11%
Top 10 Privates	8,374	8,409	8,528	8,581	8,612	8,638	8,579	205	2%
Rest of Privates (N=28)	8,095	8,075	8,190	8,161	8,284	8,304	8,325	230	3%

Graduate student enrollment provides an additional perspective, particularly significant for these top performing research universities. During the recent seven-year period from 2010-2016 the average graduate student headcount enrollment for the top 10 public institutions increased by 5% or 598 students, while the rest of the public research universities in our group grew by only 3% or 176 students. Private institutions experienced greater enrollment gains over this time period. The average graduate student headcount of top 10 private research universities grew by about 13%, an increase of 1,546 students, while the rest of the private universities in our group grew by about 6%, or an increase of 384 students (Table 8).

Table 8. Mean Graduate Headcount Enrollment, 2010-2016

Institutions with over \$40M Federal Research	2010	2011	2012	2013	2014	2015	2016	2010-16 Net Change	2010-16 Percent Change
Top 10 Publics	11,055	11,087	11,117	11,053	11,172	11,352	11,652	598	5%
Rest of Publics	6,864	6,886	6,786	6,830	6,864	6,895	7,039	176	3%
Top 10 Privates	12,258	12,524	12,584	12,757	12,972	13,369	13,804	1,546	13%
Rest of Privates	6,325	6,425	6,540	6,419	6,511	6,581	6,709	384	6%

Note that top 10 public and private research universities have significantly larger average graduate populations than the rest of the research universities in their group. This difference reflects the higher research intensity of the top 10 public and top 10 private institutions with the increased emphasis on graduate education and research.

Although, on average, both the public and private institutions have grown in the size of their undergraduate and graduate populations, the average public institution has a much larger undergraduate student body, reflecting the public character of their missions and organization, the requirements of their states for access to quality higher education, and the relatively common link between enrollment and state funding.

However, while the general trends in growth and student-body size are evident, caution in generalizing is warranted because the variation in undergraduate and graduate enrollment is substantial among these institutions. Private high performing research universities in our group of 129 institutions range from NYU's reported 2016 fall headcount total enrollment of 50,550 to Cal Tech's 2,240. Public universities, while generally recruiting substantially larger undergraduate student populations than their private counterparts, also show some significant variations. The range here is quite large from the 97,849 reported for the multiple locations of Arizona State University to the fall headcount enrollment of 8,283 at the University of Alaska Fairbanks.

These differences clearly indicate that enrollment size responds to a wide range of incentives and opportunities. In the case of the public institutions, in particular, local considerations of a state's population, the rural-urban balance, the state's commitment to funding the institution, the relationship of funding models to enrollment considerations, and the competition with nearby states all have an impact on enrollment. While all these institutions compete for students nationally and internationally, some are much more centered on their state's residents, even to the extent of limits on out of state enrollment. Others respond to the political concerns for access to the state's flagship institutions and other high-quality state universities. As a result, while increased enrollment has many advantages, the elements that contribute to an individual institution's enrollment numbers are highly variable and require close analysis of individual institutional history and policies. In addition, the organization of state institutions varies, and in some instances, students from statewide programs, fully integrated online programs, and off-campus facilities increase the reported enrollment numbers.

For private institutions, it is also difficult to make firm generalizations about the rationale for any particular university undergraduate size. Historically, many major private research universities sought to keep their undergraduate populations relatively small to create the experience of an elite liberal arts college, but over time, some of the benefits of larger undergraduate and graduate populations have clearly prompted institutions to expand their reach. In some instances, the need to diversify and internationalize the student body has encouraged the expansion of student opportunities. In others, the net tuition/fee revenue recovered has proved to be an important financial resource even if endowment and annual giving are nonetheless required to pay the full cost of a student's education. Without a careful individual examination of an institution's history and circumstances, it is difficult to offer generalizations that will serve to capture the success of Cal Tech and the scale and research achievements of NYU.

The Top American Research Universities: Revenue

The net tuition generated by an institution's total enrollment offers a likely incentive to increase the number of undergraduate and graduate students at most universities. In exploring this relationship, the different rules used by public and private universities in accounting for the various discounts students receive for different forms of financial aid makes comparisons between public and private institutions problematic. Nonetheless, it is possible to see trends in the growth of enrollment related revenue even if public-private comparisons are challenging.

One way to approach the issue of revenue is to look at the sum of the average revenue reported for two or three major components of research university financing: net tuition and fees, estimated discretionary income generated by a university's endowment (calculated at a standard payout of 4.4% of endowment assets), and for public institutions, the contribution of state appropriated funds (Table 9). For our group of institutions, the combination of these revenue elements has increased steadily over the past seven years.

Table 9. Mean Selected Revenue Streams for Top Research Universities*

Mean Total Rest of Privates	\$481,920	\$510,620	\$522,843	\$542,934	\$582,681	\$607,039	\$629,069	31%

* Dollars in thousands.

Next, we compare the relative advantage of the top 10 universities on these selected revenue sources to the rest of the top research universities in our group of 129. In Table 10, we show the net difference between the top 10 average value and the rest of the institutions average value. Of particular interest for the issue of comparative advantage, note that by 2016 the average top 10 public institution has \$598.6 million more to spend from these three revenue sources than does the average other top public research university in this group. Private universities show similar and even larger advantages, with a \$672.2 million advantage over their research peers in 2016.

Table 10. Mean Revenue Advantage of Top Public and Private Research Universities Over the Rest of Top Universities*

Revenue Sources	2010	2011	2012	2013	2014	2015	2016	2010-16 Total
Top 10 Public Net Advantage								
Mean Tuition & Fees	\$265,451	\$286,351	\$308,911	\$334,759	\$348,363	\$362,871	\$380,152	\$2,286,858
Mean State Appropriations	\$152,058	\$142,844	\$101,570	\$117,524	\$112,191	\$108,244	\$116,048	\$850,480
Mean Endowment (4.4%)	\$67,835	\$79,887	\$77,491	\$83,902	\$97,697	\$104,790	\$102,373	\$613,975
Top 10 Public Mean Advantage	\$485,344	\$509,082	\$487,972	\$536,184	\$558,251	\$575,905	\$598,573	\$3,751,312
Top 10 Private Net Advantage								
Mean Tuition & Fees	\$134,742	\$150,245	\$158,468	\$170,222	\$182,974	\$200,021	\$223,152	\$1,219,824
Mean Endowment (4.4%)	\$300,704	\$351,524	\$351,378	\$379,363	\$433,883	\$452,832	\$449,071	\$2,718,755
Top 10 Private Mean Advantage	\$435,445	\$501,768	\$509,845	\$549,585	\$616,857	\$652,853	\$672,223	\$3,938,576

* Dollars in thousands.

Note that the combination of these revenue sources, on average, for the public and private institutions demonstrates relatively close levels of advantage. The average top 10 public institutions' advantage includes state appropriations but this is offset by the average top 10 privates' significantly higher earnings on endowment. The comparative advantage demonstrated here is visible not only for the 2016 year but also throughout the period 2010-2016. This simple exercise suggests the private and public top 10 research institutions accumulated a substantial revenue advantage over the rest of the institutions within their group.

The Top American Research Universities: The Comparative Advantage

Universities do many things in addition to instruction, research, and various forms of public service. They generate money from more than the sources we highlight here in order to subsidize the pursuit of federally funded research. In the aggregate, it is the money universities can generate over and above the cost of operating a baseline institution that permits the substantial investment required to compete nationally among the best research institutions.

The exercise in this essay does not offer a complete view of the revenue advantage held by the top institutions, nor does it address how individual institutions choose to invest their funds. Some institutions have complex, expensive educational programs for undergraduates, others use large much less expensive distance education programs to capture revenue in both undergraduate and graduate programs. Whatever they do, however, all of these top institutions have grown their enrollment, generated more funds from tuition and fees, and sought ever high amounts of endowment. Private institutions generate substantially more revenue from the payout on their larger endowments than do their public counterparts, and even recognizing the differences in accounting rules between public and private institutions, it would appear that the public institutions, between net tuition and fees and the contributions of state appropriations, along with the earnings on their endowments, generate a total comparative advantage within a range similar to that of their private top 10 counterparts.

These comparative advantages have another consequence in creating entry barriers to the top levels of university research competitiveness. Out of the 945 universities that the MUP Center classifies as research universities because they have reported any federal research expenditures in the past five years (2012-16), only 161 (including standalone medical and specialized institutions) compete at the significant level of \$40M in annual federal research expenditures. These spend something on the order of 90% of all university-based annual federal research expenditures. The large and growing cumulative advantage of the top 10 in this group would appear to indicate that it will become more and more difficult to maintain large-scale research enterprises at top competitive levels.ⁱⁱⁱ

These generalizations, however, only provide a framework within which the highly evolved competition for research talent and funding plays out. The presence or absence of a research oriented medical school, the existence of a land grant mission, the size of the international student population, the balance in public institutions between in-state and out-of-state students, the extent of profit generating distance education and short term certificate programs, the reliance of an institution on tenured/tenure-track or contingent faculty, and the success of university-corporate joint ventures all have an impact on the revenue made available to support the development of a competitive research enterprise.

Maintaining Elite Research Performance

It seems likely, that over the next decade or so, the comparative advantage of these top institutions will continue to grow, recognizing that the current environment depends on today's scale, organization, and operation of the federal research agencies and their peer review systems. Predicting the future is always risky, although the structure, organization, and performance of America's top research universities have demonstrated remarkable stability and continued strength in the face of multiple national fiscal crises and substantial shifts in American attitudes towards college and advanced study.

In this context, it is helpful to remind ourselves of the remarkable stability of the top research universities that hold their advantage in the competition over many years. Of the top 10 public and private institutions we examined here, six of the publics and eight of the privates have been in the top 10 in federal research since 2010. Although four public and two privates left the top ten at least one time over those seven years (2010-2016), they fell no further down than 12th place. The institutions that took their place rose over those years from no lower than 13th. The competition at the very top of the research competitive institutions takes place among a relatively small group of high performing institutions.

Conclusion

In short, while there is much to discuss about American higher education institutions, the wide range of institutional type and characteristics argue for caution in making generalizations about the higher education industry as a whole. Even if confining the discussion to undergraduate education or graduate education, research, or individual graduate economic success, the wide range of characteristics that define the individual institutions make clear the difficulty of simple answers to questions about these academic enterprises. By focusing on particular subsets of institutions that compete in the same marketplace, as the MUP Center does, this exercise offers some help in understanding the trends and overall characteristics of the institutions in the high performing research university subset.

The success of these high performing research universities highlights the growing challenges facing academic research institutions. As the data summarized here show, there is no way to compete in this top marketplace without substantial resources, and the cost of that competition continues to rise. The ever increasing cost of the research enterprise itself, with expensive equipment, underfunded grants, high personnel costs, increased competition for funding, and rising bureaucratic and regulatory requirements, clearly indicate that the number of universities able to compete at the upper end of this distribution of research universities will likely remain small, and many aspiring research institutions may well find the competition far too rich for their resources.

Research is a luxury good for most universities because however calculated, the cost of performing research significantly exceeds the revenue it generates. As a result, research is a loss leader in higher education in almost all institutions, and while some significant revenue is possible from enterprises and activities associated with successful research institutions, this added benefit is rarely sufficient to complete the subsidies required for performing the university's research. The tendency to focus on scientific research, moreover, often obscures the significant subsidy required to sustain the non-science and non-grant funded research activities of most comprehensive institutions.

As a result, research universities seek revenue from other sources to support the deficits generated by large dynamic research enterprises. Massive fundraising campaigns, elaborate efforts to expand profit-generating distance education, expansion of undergraduate and graduate student bodies to produce enrollment driven surpluses, state financial support, expansion of revenue generating medical enterprises, all these sources and others are required to sustain the top brand name institutions. At the same time, many of these sources face limits to future expansion, whether from resistance to tuition increases, reluctance of states to pay more, declining potential student populations, and reductions in overall grant or foundation funding relative to the cost of research.

While many colleges and universities will continue to support some stellar research activities, primarily to validate their claims to participation in the elite enterprise associated with academic excellence, the scale of investment most universities will be able to sustain is likely to shrink as the competition from the top performers continues to drive the cost of participation in this marketplace upward and the availability of surpluses to support these costs declines for most institutions.^{iv}

There are many benefits for a university subsidizing a modest research enterprise, primary among them is the enhanced prestige and brand value provided by the existence of some stellar research faculty and programs. The general belief that research is a premier product of the very best universities, in America and the world, makes some research investment likely for many institutions that, while they will not compete among the top American research universities, may well be able to support quality research programs on a smaller and narrower scale.

- i Digest of Education Statistics, 2018, table 317.20.
 - ii References to private institutions in all tables and text in this article includes only private, nonprofit institutions.
 - iii A recent Chronicle of Higher Education article highlights this pressure to compete at the highest levels and its impact on the bond ratings of some private research universities. See Dan Bauman, “How Chasing Prestige is Starting to Strain Some Elite Institutions,” *Chronicle of Higher Education*, November 14, 2019.
 - iv We have discussed various elements of these themes elsewhere. See for example, John V. Lombardi and Diane D. Craig, “America’s Research Universities: Is the Enterprise Model Sustainable?” *The Top American Research Universities*, 2017; William B. Rouse, Lombardi, Craig, “Modeling Research Universities: Predicting Probable Futures of Public vs. Private and Large vs. Small Research Universities,” *Proceedings of the National Academy of Sciences*, (119, 2018); and Lombardi and Craig, “American Research Universities in an Era of Change: 2006-2015,” *The Top American Research Universities*, 2016.

Part I – The Top American Research Universities

The Center for Measuring University Performance determines the Top American Research Universities by their rank on nine different measures: Total Research, Federal Research, Endowment Assets, Annual Giving, National Academy Members, Faculty Awards, Doctorates Granted, Postdoctoral Appointees, and SAT scores. (The Source Notes section of this study provides detailed information on each of the nine indicators.) The tables group research institutions according to how many times they rank in the top 25 on each of these nine measures. The top category includes those universities that rank in the top 25 on all nine indicators. The bottom category includes universities with only one of the nine measures ranked in the top 25. Within these groups, institutions are then sorted by how many times they rank between 26 and 50 on the nine performance variables, with ties listed alphabetically. A similar methodology produces a second set of institutions—those ranked 26 through 50 on the same nine measures.

For the purpose of this study, *The Center for Measuring University Performance* includes only those institutions that had at least \$40 million in federal research expenditures in fiscal year 2016. This is the same dollar cutoff used since the 2008 report. There were 161 institutions who met our criteria, 113 public and 48 private.

The first two tables list each institution with the most current data available for each measure and its corresponding national rank (i.e., rank among all institutions regardless of whether they are privately or publicly controlled). The third through sixth tables provide the same nine data measures but with the groupings determined by the control rank (i.e., rank among all private or all public institutions). Institutions ranking in the top 25 on at least one measure are included in the tables with the (1-25) identifier, while those ranking 26 through 50 are found in the tables labeled with the (26-50) header. Many research universities rank highly both nationally and among their public or private peers, and therefore appear in more than one table.

- **The Top American Research Universities (1-25)** identifies the 50 institutions (26 private, 24 public) that rank in the top 25 nationally on at least one of the nine measures.

- **The Top American Research Universities (26-50)** identifies the 28 institutions (5 private, 23 public) that rank 26 through 50 nationally on at least one of the nine measures.
- **The Top Private Research Universities (1-25)** identifies the 32 private institutions that rank in the top 25 among all private universities on at least one of the nine measures.
- **The Top Private Research Universities (26-50)** identifies the 6 private institutions that rank 26 through 50 among their private counterparts on at least one of the nine measures.
- **The Top Public Research Universities (1-25)** identifies the 46 public institutions that rank in the top 25 among all public universities on at least one of the nine measures.
- **The Top Public Research Universities (26-50)** identifies the 24 public institutions that rank 26 through 50 among their public counterparts on at least one of the nine measures.
- **The Top Medical and Specialized Research Universities** tables identify the institutions that have at least one measure that ranks in the top 50 nationally or among their private and public counterparts.

Data found in these tables may not always match the figures published by the original source. *The Center for Measuring University Performance* makes adjustments, when necessary, to ensure that the data reflect the activity at a single campus rather than that of a multiple-campus institution or state university system. When data are missing from the original source, *The Center for Measuring University Performance* may substitute another figure, if available. A full discussion of this subject, and the various adjustments or substitutions made to the original data, is in the Data Notes section of this report.

The Center for Measuring University Performance presents these tables, along with prior years' top universities, in Microsoft Excel spreadsheets on its website [<http://mup.umass.edu>].

Part II – The Center for Measuring University Performance – *Research Universities*

The Center for Measuring University Performance's research universities consist of academic institutions that had more than \$40 million in federal research expenditures in fiscal year 2016. In the following tables, institutions are listed alphabetically with the most current data available on each measure and their rank on each measure for each year. *The Center for Measuring University Performance* provides both the national rank (rank among all universities) and the control rank (rank within private or public universities). We include five years of data for each measure, which correspond to the same data years used in each of the five prior *The Top American Research Universities* reports. In addition to the nine performance variables presented in Part I tables, these tables also include other institutional characteristics related to student enrollment, medical schools, land grant status, ownership, research focus, and National Merit and Achievement Scholars. The Source Notes section of this report provides detailed information on each data element. Tables in this section include the following:

- **Total Research Expenditures** (2012-2016)
- **Federal Research Expenditures** (2012-2016)
- **Research by Major Discipline** (2016)
- **Endowment Assets** (2013-2017)
- **Annual Giving** (2013-2017)
- **National Academy Membership** (2013-2017)
- **Faculty Awards** (2013-2017)
- **Doctorates Awarded** (2013-2017)
- **Postdoctoral Appointees** (2012-2016)
- **SAT Scores** (2012-2016)
- **National Merit and Achievement Scholars** (2013-2017)
- **Change: Research** presents trend data on total, federal, and non-federal research (2007 and 2016) in constant dollars.
- **Change: Private Support and Doctorates** provides trend data on endowment assets (2008 and 2017) and annual giving (2008 and 2017) in constant dollars, and doctorates awarded (2008 and 2017).
- **Change: Students** includes trend data on median SAT scores (2007 and 2016), National Merit and Achievement Scholars (2008 and 2017), and student headcount enrollment (2007 and 2016).
- **Institutional Characteristics** includes state location, highest degree offered, medical school and land grant status, federal research focus (summary of federal research by discipline), and total student enrollment.
- **Student Characteristics** provides headcount enrollment data broken out by level (i.e., undergraduate and graduate), part-time enrollment by level, and degrees awarded.
- **The Center for Measuring University Performance** measures presents the number of times a university ranks in the top 25 (or 26-50) on the nine quality measures in this year's report as compared to the past five years (i.e., 2013-2017 reports).

Data found in these tables may not always match the figures published by the original source. *The Center for Measuring University Performance* makes adjustments, when necessary, to ensure that the data reflect the activity at a single campus rather than that of a multiple-campus institution or state university system. When data are missing from the original source, *The Center for Measuring University Performance* may substitute another figure, if available. A full discussion of this subject, and the various adjustments or substitutions made to the original data, is in the Data Notes section of this report.

The prior years' data or ranks may differ slightly from our last report due to revised figures or estimates from the data source or institution.

The Center for Measuring University Performance's website [<https://mup.umass.edu>] provides these same tables in Microsoft Excel spreadsheets for ease of analysis. In addition to the over-\$40-million group, the online tables contain data on all institutions reporting any federal research in the past five years.

Part III – The Top 200 Institutions

The following tables list the top 200 universities and colleges on each of the nine performance measures, along with National Merit and Achievement Scholars. (The Source Notes section provides detailed information on each of the 10 data elements.) Unlike the previous tables in Parts I and II, this section includes data for all academic institutions regardless of their federal research activity level.

The Center for Measuring University Performance provides each institution's rank nationally among all universities as well as its rank by institutional control (i.e., rank among private or public peers). In cases where several institutions tie for last place, we use a different cutoff point. For National Academy members, we list all institutions with at least two National Academy members among their faculty. Tables in this section include:

- **2016 Total Research Expenditures**
- **2016 Federal Research Expenditures**
- **2017 Endowment Assets**
- **2017 Annual Giving**
- **2017 National Academy Membership**
- **2017 Faculty Awards**
- **2017 Doctorates Awarded**
- **2016 Postdoctoral Appointees**
- **2016 SAT Scores**
- **2017 National Merit and Achievement Scholars**

Data found in these tables may not always match the figures published by the original source. *The Center for Measuring University Performance* makes adjustments, when necessary, to ensure that the data reflect the activity at a single campus rather than that of a multiple-campus institution or state university system. When data are missing from the original source, *The Center for Measuring University Performance* may substitute another figure if available. A full discussion of this subject, and the various adjustments or substitutions made to the original data, is in the Data Notes section of this report.

The Center for Measuring University Performance presents these tables, along with the prior years' top 200, as Microsoft Excel spreadsheets online at [<http://mup.umass.edu>].

The Top 200 Institutions – Total Research Expenditures (2016)

Top 1-50 Institutions in Total Research Expenditures	Total Research x \$1000	National Rank	Control Rank	Institutional Control
Johns Hopkins University	2,425,199	1	1	Private
University of Michigan - Ann Arbor	1,357,228	2	1	Public
University of California - San Francisco	1,294,261	3	2	Public
University of Washington - Seattle	1,197,773	4	3	Public

Source Notes

Total Research Expenditures Federal Research Expenditures

Source: Higher Education Research and Development (HERD) Survey, FY 2016

Each year, the National Science Foundation (NSF) collects data from hundreds of academic institutions on expenditures for research and development in science and engineering fields and classifies them by source of funds (e.g., federal government, state and local government, industry, etc.). These data are the primary source of information on academic research and development (R&D) expenditures in the United States. Included in this survey are all activities specifically organized to produce research outcomes that are separately budgeted and accounted for. This “organized research” may be funded by an external agency or organization (“sponsored research”) or by a separately budgeted organizational unit within the institution (“university research”). This report excludes activities sponsored by external agencies that involve instruction, training (except training in research techniques, which is considered organized research), and health service, community service or extension service projects.

All Federally Funded Research Labs (FFRLs) are excluded from these academic expenditures data, including the following: Jet Propulsion Laboratory (California Institute of Technology); Los Alamos National Lab, Lawrence Livermore Lab, Lawrence Berkeley Lab (University of California); Software Engineering Institute (Carnegie Mellon); Argonne National Laboratory (University of Chicago); National Astronomy and Ionospheric Center (Cornell); Ames Laboratory (Iowa State University); Lincoln Laboratory (MIT); Plasma Physics Lab (Princeton); and SLAC National Accelerator Laboratory (Stanford). The NSF data no longer classify the Applied Physics Lab (APL) at Johns Hopkins as an FFRL, but federal funds support the vast majority of research conducted there. The APL makes up more than one-half of Johns Hopkins’ total federal R&D expenditures.

While inconsistencies in reporting (known and unknown) do exist here, as in any survey of this type, problems arise mostly when one breaks out the data by source of funds. NSF expects institutions to use year-end accounting records to complete this report, and there are nationally recognized accounting guidelines for higher education institutions. However, there are also countless variations in institutional policy that determine whether the university reports a particular expenditure as coming from one source or another, or possibly not counted at all. Take federal formula funds for agriculture (e.g., Hatch-McIntire, Smith-Lever) as an example. We conducted an informal survey of the appropriate institutions in the Association of American Universities (AAU) and found that two out of eleven land grants did not include any of these federal funds in their 1997 NSF data, while others included all or some of these monies. Because these funds make

up a very small percentage of the total research expenditures in any given year, the impact on our total research rankings is slight. The agriculture formula funds will have a somewhat greater, but still small, impact on the federal research rankings.

We believe that the reporting inconsistencies in the data are relatively minor when using the total research expenditures and the federal research expenditures component. Federal and state government audits of institutional accounting make deceptive practices highly unlikely, even though these entities do not audit the NSF data directly. NSF goes to great lengths to verify the accuracy of the data, especially federal expenditure data—checking them against several other federal agencies that collect the same or similar information. In fact, all major federal agencies and their subdivisions submit data to NSF identifying research obligations to universities each year. Historically, the NSF data have tracked very closely the data reported by universities. Further, for their National Patterns of R&D Resources series, NSF prefers to use the figures reported by the performers of the work (that is, academic institutions, industry, nonprofits) because they believe that the performers are in the best position to accurately report these expenditures.

In some sections of this report, these expenditure data are deflated to constant 1983 dollars to show real change over time. While NSF uses the Gross Domestic Price (GDP) implicit price deflator in its reports on federal trends in research, we use the Higher Education Price Index (HEPI) because of its narrower focus. Originally developed by Research Associates of Washington and currently managed by Commonfund Institute, the HEPI illustrates the effect of inflation on college and university operations.¹ In contrast, the GDP implicit price deflator is based on change in the entire U.S. economy and, as noted by NSF itself, “[its] use more accurately reflects an ‘opportunity cost’ criterion [i.e., the value of R&D in terms of the amount of other goods and services that could have been spent with the same amount of money], rather than a measure of cost changes of doing research.”²

Endowment Assets

Source: NACUBO-Commonfund Study of Endowment, endowment market value as of June 30, 2017.

Institutions report the market value of their endowment assets as of June 30 to three different sources, and they quite often use three different values. For this project, we use the NACUBO-Commonfund Study of Endowment because of NACUBO’s long history of reporting endowments of higher education institutions, their emphasis on using audited financial statements, and their focus on net assets (i.e., includes returns on investments and excludes investment fees and other withdrawals). NACUBO conducts its study annually and reports the results each February in the Chronicle of Higher Education.

Another source for endowment assets is the Council for Aid to Education's (CAE) annual Voluntary Support of Education (VSE) survey, cosponsored by the Council for Advancement and Support of Education (CASE) and the National Association of Independent Schools. The VSE survey is useful as a secondary resource because it provides more single-campus data than the other two sources. For those institutions that report a system-wide total to NACUBO, we often use the VSE data to calculate a campus' percentage contribution to the entire system, applying that factor to the NACUBO figure. In other cases, we may substitute the VSE figure when the institution indicates that this is a good data source.

The National Center for Education Statistics (NCES) Integrated Postsecondary Education Data System (IPEDS) Finance Survey also collects information on endowment assets. IPEDS data are released later than other two sources and are used when NACUBO nor VSE figures are unavailable.

In our inaugural report of *The Top American Research Universities* in 2000, we noted the wide variation in the reporting of endowment market value between all three sources. An examination of the 1997 endowment figures showed only one university (University of North Carolina at Chapel Hill) had submitted the same figure to each of the three organizations. In a more recent study of major research universities, we found about one-third of the all institutions report identical figures but just seven universities in our over \$40 million federal research group. In the earlier study, we found that endowment assets reported to IPEDS tended to be lower than NACUBO or VSE data, but this is no longer true. In general, the greater the endowment the likelihood that the figures reported to the three sources will vary. Both studies found no consistent pattern to explain reporting variations among the institutions.

Annual Giving

Source: Council for Aid to Education's Voluntary Support of Education (VSE) Survey, FY 2017.

The Council for Aid to Education (CAE), formerly an independent subsidiary of RAND, has produced the Voluntary Support of Education (VSE) Survey since 1957. The annual giving data include all contributions actually received during the institution's fiscal year in the form of cash, securities, company products, and other property from alumni, non-alumni individuals, corporations, foundations, religious organizations, and other groups. Not included in the totals are public funds, earnings on investments held by the institution, and unfulfilled pledges.

CAE's VSE Data Miner service, available online, provides 11 years of data for all participating institutions. Although this is a

subscription-based service and requires a user ID and password, limited access is available online at [<http://www.cae.org/vse>].

National Academy Members

Source: National Academy of Sciences, National Academy of Engineering, and National Academy of Medicine membership directories for 2017.

One of the highest honors that academic faculty can receive is membership in the National Academy of Sciences (NAS), the National Academy of Engineering (NAE), or the National Academy of Medicine (NAM), formerly known as the Institute of Medicine. All three are private, nonprofit organizations and serve as advisors to the federal government on science, technology, and medicine. Nominated and voted on by active members, newly elected members of these organizations receive life terms. Individuals elected to membership come from all sectors—academia, industry, government, and not-for-profit agencies or organizations. Member election dates are in February (NAE), April (NAS), and October (NAM).

The data collected for these rankings use active or emeritus members at their affiliated work institution, as reported in the online membership directories. In all cases, we were able to determine the specific campus for individual members. We re-check institutional affiliation annually to account for established members who have changed employers or whose membership is no longer active.

Faculty Awards in the Arts, Humanities, Science, Engineering, and Health

Source: Directories or web-based listings for multiple agencies or organizations.

For this category, we collect data from several prominent grant and fellowship programs in the arts, humanities, science, engineering, and health fields. Included in this measure are:

- American Council of Learned Societies (ACLS) Fellows, 2016-17
- Beckman Young Investigators, 2017
- Burroughs Wellcome Fund Career Awards, 2017
- Cottrell Scholars, 2017
- Fulbright American Scholars, 2017-18
- Getty Scholars in Residence, 2017-18
- Guggenheim Fellows, 2017
- Howard Hughes Medical Institute Investigators, 2017
- Lasker Medical Research Awards, 2017
- MacArthur Foundation Fellows, 2017

- National Endowment for the Humanities (NEH) Fellows, 2018
- National Humanities Center Fellows, 2017-18
- National Institutes of Health (NIH) MERIT (R37), FY 2017
- NSF CAREER awards, 2017
- Newberry Library Long-term Fellows, 2017-18
- Pew Scholars in Biomedicine, 2017
- Presidential Early Career Awards for Scientists and Engineers (PECASE), 2015-2017
- Robert Wood Johnson Policy Fellows, 2017-18
- Searle Scholars, 2017
- Sloan Research Fellows, 2017
- Woodrow Wilson Fellows, 2017-18

While the vast majority of these programs clearly identify a particular campus, in a few instances we used the institution's web-based phone directory to determine the correct campus.

Doctorates Awarded

Source: NCES IPEDS Completions Survey, doctoral degrees awarded between July 1, 2016, and June 30, 2017.

Each year, universities report their degrees awarded to the NCES in the IPEDS Completions Survey. IPEDS provides straightforward instructions for reporting doctoral degrees awarded, and we do not find any inconsistencies in reporting among the universities included in our rankings. IPEDS asks each institution to identify the number of Doctor of Education, Doctor of Juridical Science, Doctor of Public Health, and Doctor of Philosophy degrees awarded between July 1 and June 30.

Most institutions in our study submit degree data by campus or offer doctoral degrees solely or primarily at the main campus.

In addition to doctorate degrees, we present degrees awarded at other levels—associate's, bachelor's, master's, and professional degrees—in the Student Characteristics table.

Postdoctoral Appointees

Source: NSF/Division of Science Resource Statistics (SRS) Survey of Graduate Students and Postdoctorates in Science and Engineering, Fall 2016.

Each year, NSF and NIH collect data from all institutions offering graduate programs in any science, engineering, or health field. The Survey of Graduate Students and Postdoctorates in Science and Engineering (also called the Graduate Student Survey or GSS) reflects graduate enrollment and postdoctoral employment

at the beginning of the academic year. Postdoctorates are defined in the GSS as “individuals with science and engineering PhD's, MD's, DDS's or DVM's and foreign degrees equivalent to U.S. doctorates who devote their primary effort to their own research training through research activities or study in the department under temporary appointments carrying no academic rank.” The definition excludes clinical fellows and those in medical residency training programs unless the primary purpose of their appointment is for research training under a senior mentor.

In the methodological notes for this survey, ³NSF indicates that it verifies the data with the institutional coordinator when dramatic year-to-year fluctuations are noted. In addition, in this data set, it is unclear whether an institution has actually reported zero postdocs or NSF has simply assigned a zero for non-response (rather than imputing by using prior-year or peer data, as described in NSF methodological notes). This year, in cases where we suspect it is not a true zero, we left the field blank.

Although each doctorate-granting campus submits data separately, NSF often aggregates them in its published reports. In all cases, we obtain the single-campus data for these schools directly from NSF.

SAT Scores

Source: NCES IPEDS Survey, SAT and ACT scores for Fall 2016.

IPEDS reports the 25th and 75th percentiles for verbal and quantitative SAT I scores for most institutions in our study. For our measure, we calculated the median of that range. Some institutions report the ACT instead of the SAT to IPEDS and some report both. We selected the test which has the greatest percentage of students reporting. To convert ACT scores, we use a conversion table provided by The College Board⁴ to generate a comparable SAT equivalent score. When an institution submits neither an SAT nor ACT score, we substitute data from other national data sources.

Other Measures of Undergraduate Quality

National Merit and Achievement Scholars

Source: The 2016-17 National Merit Scholarship Corporation Annual Report, which reflects the 2017 freshman class.

The National Merit Scholarship Corporation (NMSC) is an independent, nonprofit organization that awards scholarships to the nation's outstanding high school seniors based on their academic achievement, qualifying test scores, high school principal and counselor recommendations, and their activities, interests, and goals. The NMSC names approximately 15,000 National Merit Finalists each February. Of these, about 8,000 will receive a National Merit \$2,500 Scholarship, a corporate-sponsored scholarship, or a college-sponsored scholarship.

Until it was discontinued in 2015, National Achievement Scholars were selected and funded in a similar fashion and represented the nation's outstanding African-American students. Ideally, the National Hispanic Scholars Program should also be included in this category, but it does not track the enrollment of its scholarship winners. Should it do so in the future, we will include these students in our data. In this study, Merit and Achievement scholarships are credited to the main campus if the NMSC Annual Report does not indicate a branch campus.

While the number of National Merit and National Achievement award winners in the entering class provides an indication of the attractiveness of a university's undergraduate program to outstanding students, it is also an indicator that is sensitive to institutional policies on financial aid. Because the number of Merit Scholars is small, relatively small changes in institutional aid policies can have a significant impact on the number of National Merit Scholars enrolling in institutions. The average SAT score provides a broader-based and more reliable measure of overall undergraduate quality; for those reasons, we prefer the SAT scores to the number of National Merit and Achievement Scholars as an indicator of undergraduate quality.

Institutional Characteristics

Medical Schools

Source: NCES IPEDS Completions Survey, MD degrees awarded between July 1, 2016, and June 30, 2017.

Although the IPEDS Institutional Characteristics Survey does have a "medical" field that indicates whether an institution grants a medical degree, we choose not to use its data because it includes medical degrees in Veterinary Medicine, Dentistry, and other professional health-related fields. For our measure, we determined whether a particular campus awarded any MD degrees during the academic year. If the institution did not submit any data to IPEDS for that year, we then looked at whether it was accredited by the American Medical Association to determine whether the institution has a medical school.

Land Grant Institutions

Source: National Association of State Universities and Land Grant Colleges.

The first Morrill Act in 1862 appropriated federal funds for universities to provide agricultural and technical education to their citizens. A second Morrill Act in 1890 expanded eligibility to include several historically black colleges and universities, and in 1994 several Native American tribal colleges were recognized as land grant institutions. Today, there is at least one land grant institution in each state and U.S. territory and in the District of Columbia. Of the 106 institutions, most are public universities.

Federal land grant institutions receive both federal and state dollars in support of their agricultural and extension activities.

While land grant status technically applies to some university systems, such as the University of California and the University of Nebraska, for our study we designate as land grant institutions only those schools that actually perform that function (e.g., UC-Berkeley, UC-Davis, UC-Riverside, Nebraska-Lincoln). In these cases, the land grant field will identify whether an institution is part of a system-wide land grant and whether the vast majority of the activity occurs on that campus. For example, UC-Davis is coded as "Yes-System" while UCLA is coded as "No-System."

Research Focus

Source: Higher Education Research and Development, FY 2016.

In addition to reporting expenditure data by source of funds, NSF identifies in what major disciplines the money is expended. In the Research by Discipline table we provide the proportion of total and federal expenditures in each discipline for those institutions with more than \$40 million in federal research. These data are useful for developing groups of similar institutions for peer analysis.

The Institutional Characteristics table provides a summary measure of an institution's research strength and concentration based on these discipline-level expenditures. Universities with 95-100% of their federal research dollars spent in one particular discipline are coded as "all." We identify institutions with 75-94% in one area as "heavy" and label those with 50-74% of their expenditures concentrated as "strong." Other universities with 25-49% in one or more disciplines we describe as "moderate." A few institutions (but none in the more than \$40 million group) have expenditures distributed fairly evenly across the disciplines; those we code as "mixed."

In some cases, where an institution reports as a multi-campus entity, we made adjustments to break out the discipline-level expenditure data by single campus. Typically, this involved moving all or a portion of the life sciences expenditures to the health or medical center campus. IPEDS fall enrollment and graduate degrees by discipline data also were used to help in this effort.

While these data offer some insight as to the research structure of a university, their usefulness is limited. For example, we may be tempted to use the life sciences as a surrogate for medical research, but we must remember that they also include agricultural and biological sciences. Further, the growing trend toward multidisciplinary and interdisciplinary projects may make it more difficult for universities to accurately reflect expenditures by discipline or sub-discipline. We choose not to break out these sub-disciplines because the data are increasingly prone to error as further adjustments are made.

Student Characteristics

Fall Enrollment

Source: NCES IPEDS Fall Enrollment Survey, 2016.

Each November, institutions report their current fall headcount enrollment to the IPEDS Fall Enrollment Survey. Enrollment figures include both degree seeking and non-degree seeking students. We provide the headcount enrollment by level as presented by IPEDS, along with the percentage of those attending part-time. Graduate students include those seeking specialist degrees in engineering and education. First professional students include those seeking degrees in medical fields, such as Chiropractic, Dentistry, Medicine, Optometry, Osteopathic Medicine, Pharmacy, Podiatry, and Veterinary Medicine, as well as those seeking degrees in Law and Theology.

Each campus in our study submits enrollment data by campus, except for the few institutions identified in our Data Notes section. Because this is an informational item and not one of our nine quality measures, we did not attempt to adjust these figures.

Federal Research with and without Medical School Research

Source: Association of American Medical Colleges, FY 2016

The Association of American Medical Colleges collects data on federally sponsored research at medical colleges through on the Liaison Committee on Medical Education (LCME) Part I-A, Annual Financial Questionnaire. We calculate each medical school's federal R&D by summing the recorded dollars and a portion of the relative administrative costs. We exclude the not-recorded dollars.

Data Notes

The raw data used for *The Top American Research Universities* project—obtained from federal agencies and national organizations—often contain information on single-campus institutions, multiple-campus institutions, and state university systems, without clearly identifying the distinctions. This makes national comparisons difficult and unreliable.

To increase the validity and usefulness of these data, we adjusted the original reported figures, when necessary, to ensure that all data represent the strength of a single-campus institution. MUP Center bases its adjustments on information gathered from the reporting agency or from the university itself. In cases where the published data represent a single campus, we do not adjust the data. When the data represent more than one campus, we first attempt to obtain a figure directly from the National Science Foundation (NSF) (for research expenditures and post-doctorates), from the institution itself, or from the university system office that submitted the data. If unavailable from those primary sources, we use an estimated or substitute figure derived from information found on the institution's website.

If the institution provides an estimate representing at least 97% of the originally published figure, we credit the full amount to the main campus. Otherwise, we use the estimate provided by the institution.

MUP Center does not adjust the private university data because of multi-campus or system-wide reporting. We treat all private universities in this study as single-campus institutions because, while some may have multiple campuses, they are generally in or around a single city and considered an integral part of the main campus. Furthermore, private institutions generally do not break out their data by regional, branch, or affiliated campus as often happens with public institutions.

The following tables outline the various adjustments or substitutions that we made to the original data. The tables list institutions alphabetically and include both private and public universities. For the purpose of this report, we provide notes for institutions with more than \$40 million in fiscal year 2016 federal research.

Data Notes for Universities with Over \$40 Million in Federal Research

University / Statistics	Original Data (dollars in thousands)	MUP Data (dollars in thousands)	Comments
Arizona State University			
2017 Doctorates		677	Combined IPEDS reported data.
Auburn University			
2017 Endowment		738,018	Estimate at least 97% is main campus.
2017 Giving		104,418	Estimate at least 97% is main campus.
Augusta University			
2016 Endowment	210,595	212,447	Revised 2016 NACUBO.
California Institute of Technology			
2016 Endowment	2,106,724	2,217,372	Revised 2016 NACUBO.

Pennsylvania State University - University Park			
2016 Federal R&D	532,669	463,244	Estimate 87.0% based on university documents.
2016 Postdocs	461	338	Estimate 73.3% based on postdoc disciplines.
2016 Total R&D	809,985	704,687	Estimate 87.0% based on university documents.
2017 Endowment	3,990,781	2,118,610	Substituted data from published documents.
2017 Giving	198,750	148,864	Estimate 74.9% based on university documents.
Purdue University - West Lafayette			
2017 Endowment		2,424,872	Estimate at least 97% is main campus.
2017 Giving		152,638	Estimate at least 97% is main campus.
Rockefeller University			
2016 Endowment	1,927,404	1,887,407	Revised 2016 NACUBO.
2017 Giving		8,357	Substituted 2017 IPEDS.

Data Notes for Universities with Over \$40 Million in Federal Research

University / Statistics	Original Data (dollars in thousands)	MUP Data (dollars in thousands)	Comments
Rush University			
2017 Giving		6,375	Substituted 2017 IPEDS.
Rutgers University - New Brunswick			
2017 Endowment	1,220,265	985,463	Substituted 2017 IPEDS.
2017 Giving	164,572	113,555	Estimate 69.0% based on university documents.
Scripps Research Institute			
2017 Endowment			Did not report to NACUBO, VSE or IPEDS in 2017.
Temple University			
2016 SAT			Does not require SAT/ACT.
Texas A&M University - College Station			
2017 Endowment	11,556,260	10,908,003	Substituted 2017 VSE.
Thomas Jefferson University			
2017 Endowment		539,088	Substituted 2017 VSE. Did not report to NACUBO.
Tulane University			
2016 Endowment	1,171,314	1,150,687	Revised 2016 NACUBO.
U.S. Air Force Academy			
2017 Endowment		123,000	Substituted 2017 VSE. Did not report to NACUBO.
Uniformed Services University of the Health Sciences			
2017 Endowment			Did not report to NACUBO, VSE or IPEDS in 2017.
University of Alabama - Birmingham			
2017 Endowment	1,351,160	475,558	Substituted 2017 VSE.
University of Alabama - Huntsville			
2017 Endowment	1,351,160	75,244	Substituted 2017 VSE.
University of Alaska - Fairbanks			
2017 Endowment	320,705	187,163	Estimate 58.4% based on IPEDS.
2017 Giving		24,561	Estimate at least 97% is main campus.
University of Arizona			
2016 SAT			Does not require SAT/ACT.
University of Arkansas for Medical Sciences			
2017 Endowment		34,830	Substituted 2017 IPEDS. Did not report to NACUBO nor VSE.
2017 Giving		20,958	Substituted 2017 IPEDS.
University of California - Berkeley			
2017 Endowment	1,794,602	4,271,453	Substituted 2017 VSE.

Data Notes for Universities with Over \$40 Million in Federal Research

University / Statistics	Original Data (dollars in thousands)	MUP Data (dollars in thousands)	Comments
University of California - Davis			
2017 Endowment	398,274	1,107,701	Substituted 2017 VSE.
University of California - Los Angeles			
2017 Endowment	2,062,573	4,356,826	Substituted 2017 VSE.
University of California - Riverside			
2017 Endowment		226,990	Substituted 2017 VSE. Did not report to NACUBO.
University of California - San Diego			
2017 Endowment	621,440	1,339,164	Substituted 2017 VSE.
University of California - San Francisco			
2017 Endowment	1,306,564	2,545,101	Substituted 2017 VSE.
University of California - Santa Barbara			
2016 Endowment	273,679	274,371	Revised 2016 NACUBO.
University of California - Santa Cruz			
2017 Endowment	96,954	191,185	Substituted 2017 VSE.
University of Cincinnati - Cincinnati			
2017 Endowment		1,282,743	Estimate at least 97% is main campus.
University of Colorado - Boulder			
2017 Endowment	1,220,204	596,407	Substituted data from published documents.
2017 Giving	312,786	134,126	Estimate 42.9% based on university documents.
University of Colorado - Denver/Anschutz Medical			
2017 Endowment	1,220,204	493,142	Substituted data from published documents.
2017 Giving	312,786	178,660	Estimate 57.1% based on university documents.
University of Connecticut - Health Center			
2016 Federal R&D	143,955	44,029	Estimate 30.6% based on university documents.
2016 Postdocs	233	95	Estimate 40.8%% based on postdoc disciplines.
2016 Total R&D	257,958	78,897	Estimate 30.6% based on university documents.
2017 Doctorates	361	33	Estimate based on university factbook.
2017 Endowment	421,894	105,934	Estimate 25.1% based on published documents.
2017 Giving	57,206	4,748	Estimate 8.3% based on university documents.
University of Connecticut - Storrs			
2016 Federal R&D	143,955	99,926	Estimate 69.4% based on university documents.
2016 Postdocs	233	138	Estimate 59.2% based on postdoc disciplines.
2016 Total R&D	257,958	179,061	Estimate 69.4% based on university documents.
2017 Doctorates	361	328	Estimate based on university factbook.
2017 Endowment	421,894	315,960	Estimate 74.9% based on published documents.
2017 Giving	57,206	52,458	Estimate 91.7% based on university documents.

Data Notes for Universities with Over \$40 Million in Federal Research

University / Statistics	Original Data (dollars in thousands)	MUP Data (dollars in thousands)	Comments
University of Dayton			
2017 Giving		37,840	Substituted 2017 IPEDS.
University of Hawaii - Manoa			
2017 Endowment		307,777	Estimate at least 97% is main campus.
University of Houston - University Park			
2017 Endowment		945,278	Substituted 2017 VSE.
University of Illinois - Chicago			
2017 Endowment		2,556,323	Substituted 2017 VSE.
University of Illinois - Urbana-Champaign			
2017 Endowment		2,556,323	Substituted 2017 VSE.
University of Kansas - Lawrence			
2016 Federal R&D	117,549	79,916	Estimate 68.0% based on university documents.
2016 Postdocs		91	Estimate 47.9% based on postdoc disciplines.
2016 Total R&D		241,659	Estimate 68.0% based on university documents.
2017 Doctorates		310	Estimate based on KS Board of Regents data book and IPEDS Completions.
2017 Endowment		1,612,287	Estimate 77.4% based on published documents.
2017 Giving		173,630	Estimate 80.0% based on university documents.
University of Maryland - Baltimore			
2017 Endowment		1,099,289	Substituted 2017 VSE.
University of Maryland - Baltimore County			
2017 Endowment		1,099,857	Substituted 2017 VSE.
University of Maryland - College Park			
2017 Endowment		316,188	Substituted 2017 VSE.
University of Massachusetts - Amherst			
2017 Endowment		832,679	Substituted 2017 VSE.
University of Massachusetts Medical School - Worcester			
2017 Endowment		819,677	Substituted 2017 IPEDS.
2017 Giving		6,413	Substituted 2017 IPEDS.
University of Michigan - Ann Arbor			
2017 Endowment		10,936,014	Estimate at least 97% is main campus.
2017 Giving		456,132	Estimate at least 97% is main campus.
University of Minnesota - Twin Cities			
2017 Endowment		3,493,641	Estimate at least 97% is main campus.
2017 Giving		332,948	Estimate 96.1% based on IPEDS and university documents.

Data Notes for Universities with Over \$40 Million in Federal Research

University / Statistics	Original Data (dollars in thousands)	MUP Data (dollars in thousands)	Comments
University of Missouri - Columbia			
2017 Endowment	1,603,230	970,162	Substituted 2017 VSE.
University of Nebraska - Lincoln			
2017 Endowment	1,616,900	958,039	Estimate 59.3% based on 2017 IPEDS.
2017 Giving	210,688	104,678	Estimate 49.7% based on 2017 IPEDS.
University of Nebraska Medical Center			
2017 Endowment	1,616,900	254,949	Estimate 15.8% based on 2017 IPEDS.
2017 Giving	210,688	106,010	Estimate 50.3% based on 2017 IPEDS.
University of New Hampshire - Durham			
2017 Endowment		363,202	Substituted 2017 VSE. Did not report to NACUBO.
University of New Mexico - Albuquerque			
2017 Giving		90,227	Estimate at least 97% is main campus.
University of North Dakota			
2016 Endowment	230,656	230,461	Revised 2016 NACUBO.
University of Oklahoma - Health Sciences Center			
2016 Federal R&D	128,260	56,107	Estimate 43.7% based on university documents.
2016 Total R&D	240,239	109,493	Estimate 45.6% based on university documents.
2017 Endowment	1,646,184	541,406	Estimate 32.9% based on IPEDS.
2017 Giving	302,983	42,763	Estimate 14.1% based on 2017 IPEDS.
University of Oklahoma - Norman			
2016 Federal R&D	128,260	72,153	Estimate 56.3% based on university documents.
2016 Total R&D	240,239	130,746	Estimate 54.4% based on university documents.
2017 Endowment	1,646,184	1,104,778	Estimate 67.1% based on IPEDS.
2017 Giving	302,983	260,220	Estimate 85.9% based on 2017 IPEDS.
University of Rochester			
2016 SAT			Did not report SAT/ACT.
University of South Carolina - Columbia			
2017 Giving		174,208	Estimate at least 97% is main campus.
University of South Florida - Tampa			
2017 Giving		52,986	Estimate at least 97% is main campus.
University of Tennessee - Knoxville			
2017 Endowment	1,214,619	659,489	Substituted 2017 VSE.
University of Texas - Austin			
2017 Endowment	26,535,095	11,867,843	Substituted 2017 VSE.
